

Beta Maturity Science Review For NOAA-20 VIIRS Surface Albedo EDR

Prepared by

Yunyue Yu, NESDIS/STAR

Jingjing Peng, Yuan Zhou, Dongdong Wang, ESSIC/CICS

July 19, 2018

- LSA Cal/Val Team Members
- Product Requirements
- NOAA 20 VIIRS LSA Status
- Preliminary Evaluation of the LSA
- Documentation (Science Maturity Check List)
- Beta Maturity Conclusions
- Path Forward/Future Plan

LSA EDR Cal/Val Team Members

	Name	Organization	Major Task
STAR/EMB	Ivan Csiszar	NOAA/NESDIS/STAR	Land Lead
	Yunyue Yu	NOAA/NESDIS/STAR	EDR Lead, algorithm development/improvement, calibration/validation, team management
	Shunlin Liang	NOAA Affiliate UMD/CICS	product monitoring and validation ; algorithm development/improvement
	Jingjing Peng	NOAA Affiliate, UMD/CICS	product monitoring and validation ; algorithm development/improvement
	Dongdong Wang	NOAA Affiliate, UMD/CICS	product monitoring and validation ; algorithm development/improvement
	Yuan Zhou	UMD/CICS	algorithm improvement, product calibration/validation
STAR/OPDB	Walter Walf	NOAA/NESDIS/STAR	STAR ASSIST Lead
	Arthur Russakoff	NOAA Affiliate, SciTech/IMSG	STAR ASSIST, Algorithm System integration
	Eric Buzan	NOAA Affiliate, SciTech/IMSG	STAR ASSIST, Algorithm System integration

Product Requirements

Product Requirements from JPSS L1RD*

	JPSS VIIRS LSA	
Attribute	Threshold	Objective
Geographic coverage	global, including land, ocean and ice surface conditions	
Horizontal Cell Size	0.80 km	0.50Km
Mapping Uncertainty	1 km at Nadir	1 km
Measurement Range	0 to 1.0 (albedo units)	0 to 1.0
Measurement Accuracy	0.05 (albedo units)	0.02
Measurement Precision	0.08 (albedo units)	0.0125

*http://www.jpss.noaa.gov/assets/pdfs/technical_documents/level_1_requirements_supplement.pdf

JPSS/GOES-R Data Product Validation Maturity Stages – COMMON DEFINITIONS (Nominal Mission)

1. Beta

- Product is minimally validated, and may still contain significant identified and unidentified errors.
- Information/data from validation efforts can be used to make initial qualitative or very limited quantitative assessments regarding product fitness-for-purpose.
- Documentation of product performance and identified product performance anomalies, including recommended remediation strategies, exists.

NOAA-20 VIIRS Albedo Status

- The enterprise VIIRS Albedo algorithm has been developed and integrated into the framework. The final DAP (originally for SNPP) was delivered to NDE at the end of March, 2018.
- The enterprise LSA process is a consist of two components. The granule albedo is computed online from a combination of the direct estimated albedo and a historical temporally filtered gap-free albedo; the historical albedo is computed offline using previous days granule albedo.
- The enterprise LSA algorithm is applied in NDE for NOAA 20 data, with the LUTs developed for S-NPP VIIRS sensor.
 - The LUT for NOAA-20 LSA production has been developing, and will be applied for the LST provisional release.
 - Evaluation of the NDE NOAA-20 LSA data by the science team (following slides) is limited. .

- Visual inspection of the granule and global composite NOAA-20 LSA image
- Verification of Quality Flags
- Algorithm performance validation
 - Direct-comparison with ground measurements
 - Cross-comparison with MODIS Albedo
- Metadata analysis/validation
 - Check possible error in metadata calculation

Quality flag analysis/validation (2-5 slides)

Defined Quality Flags

PQI

Byte	Bit	Flag	Source	Description
0	0-1	Overall quality	LSA	00: high-quality retrieval, 01: retrieval, 10:no retrieval
	2-3	Cloud condition	Cloud mask	00=confidently clear, 01=probably clear,10=probably cloudy,11=confidently cloudy
	4	SDR quality	SDR	0 = normal , 1 = bad data
	5	Solar zenith angle flag	SDR	0: favorable SZA, 1: very large SZA (>60)
	6	View zenith angle flag	SDR	0: favorable VZA, 1: very large VZA (>60)
	7	Spare		
1	0-2	Retrieval Path	LSA	000: generic, 001: desert, 010: snow, 011: seaice, 100: no retrieval
	3-4	Temporal filter quality flag	LSA	00: high-quality retrieval, 01: degraded retrieval, 10:no retrieval
	5	Online filter flag	Online filter	0: no filter, 1: filtered
	6-7	Spare		

PQI and DQF provides the Data Quality information of VIIRS albedo product.

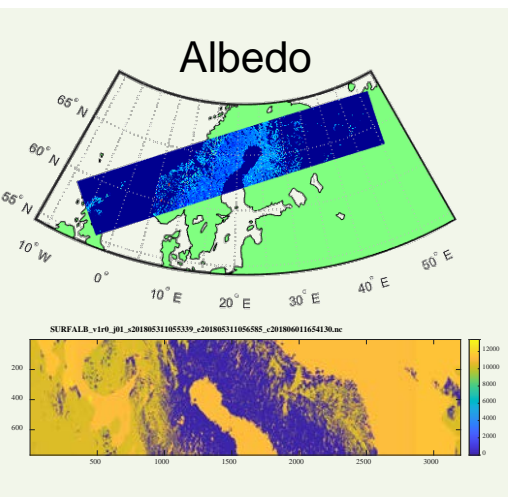

- Each bit was locally recomputed, and compared with the value from the original input/out files. They all matched and no issues found.
- The redundant DQF contains the same content with the first 2 bits in PQI. Is it still needed?

DQF

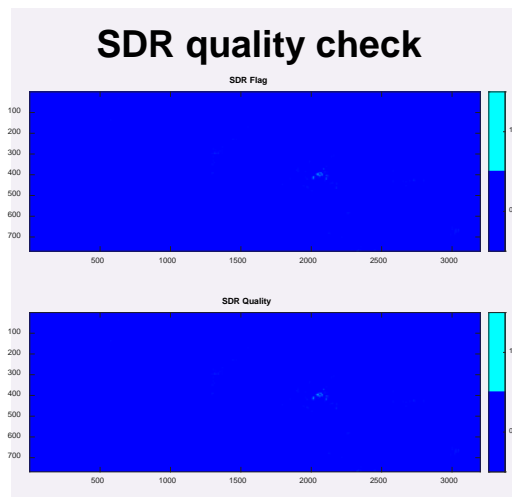

Byte	Bit	Flag	Source	Description
0	0-1	Overall quality	LSA	00: high-quality retrieval, 01: retrieval, 10:no retrieval

Quality flag analysis/validation (2-5 slides)

Albedo value evaluation

- Direct comparison with Ground measurement (SURFRAD)
 - Jan 7~June 9, 2018
 - over 7 sites
- Cross-comparison with MODIS daily mean albedo

SURFRAD site distribution
(<https://www.esrl.noaa.gov/gmd/grad/surfrad/sitepage.html>)

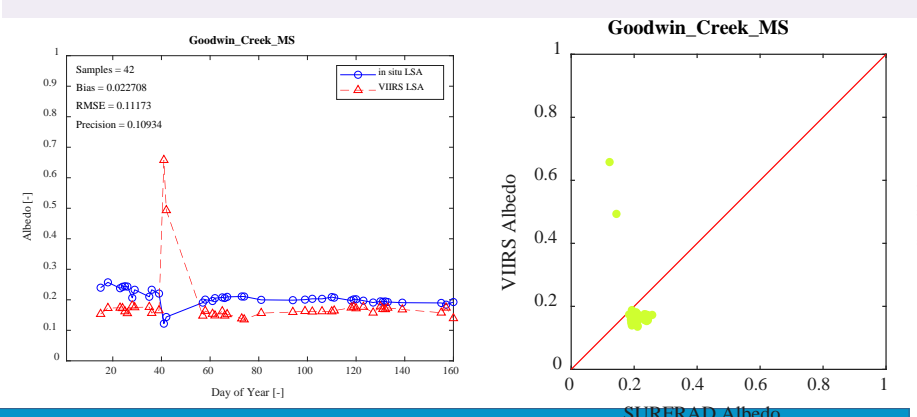

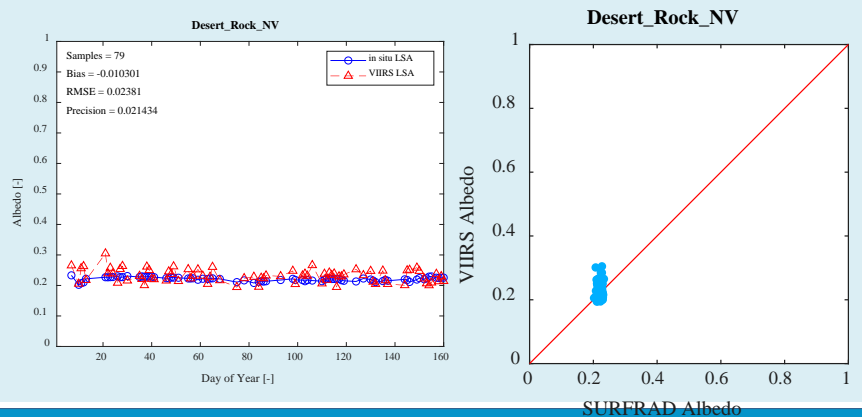

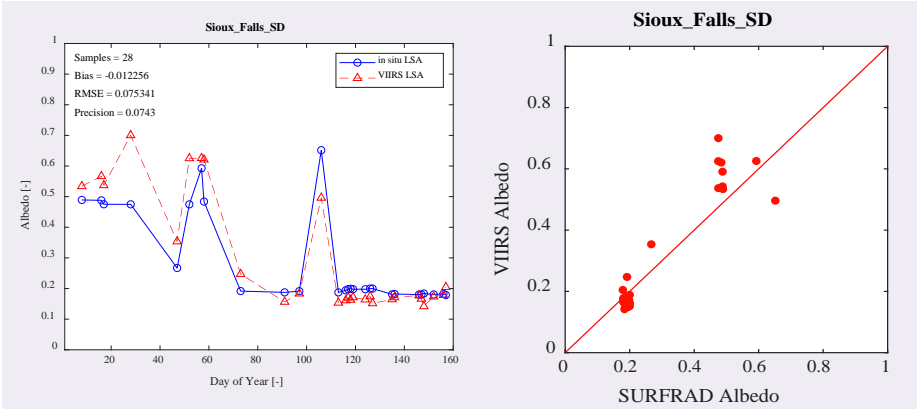

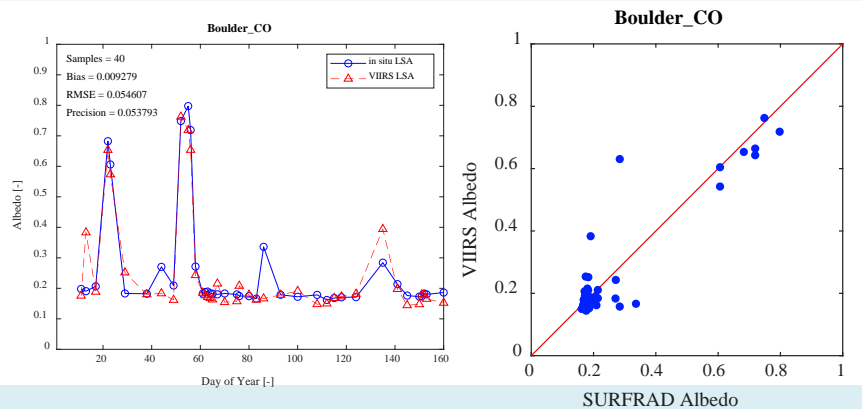

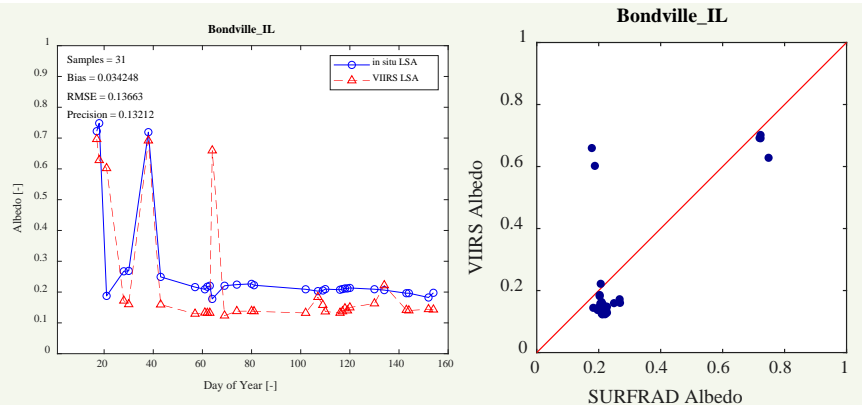

- Direct-comparison with ground measurements
 - Validation of N20 albedo against SURFRAD
 - Time Analysis series
 - Jan 7~June 9, 2018
 - over 7 sites

	Requirement	Performance
Accuracy (Bias)	0.05	-0.021
Precision (Standard deviation of error)	0.08	0.089

J1 NDE albedo (beta version) vs. SURFRAD albedo

J1 NDE albedo generally can catch the surface albedo variation trend. The outliers mainly happens at very large SZA (>60) and VZA (>60).

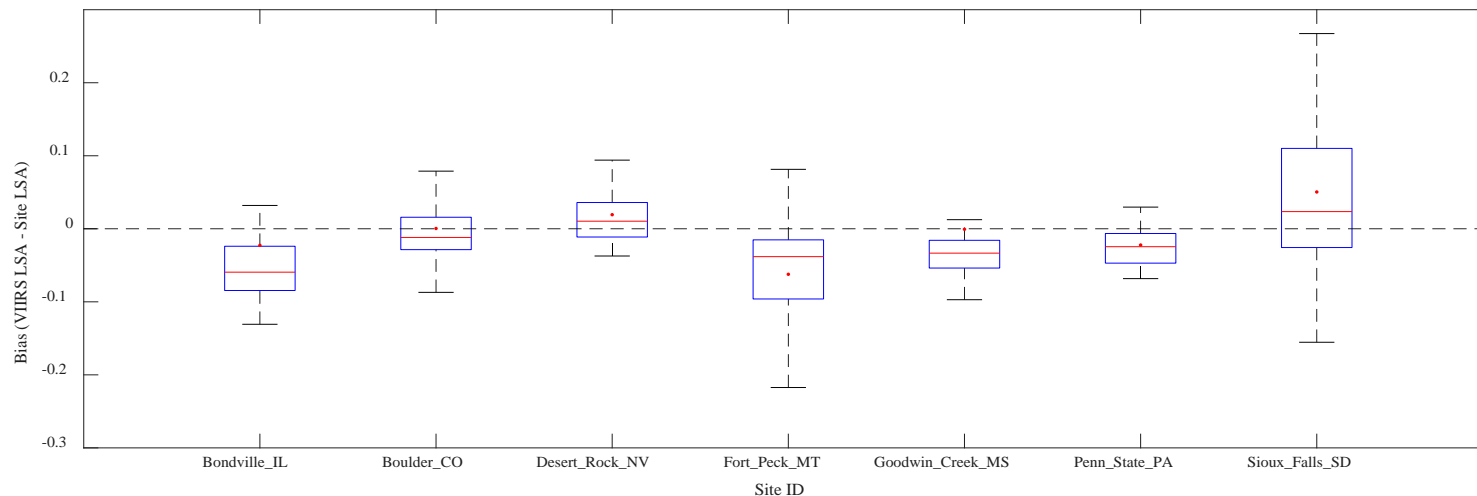

J1 NDE albedo (beta version) vs. SURFRAD albedo

J1 NDE albedo generally shows reasonable output, but still needs further improvement to meet the requirement.

- LUTs need to be updated according to N20 VIIRS spectral response
- Gridded Albedo Product should be developed to reduce noise

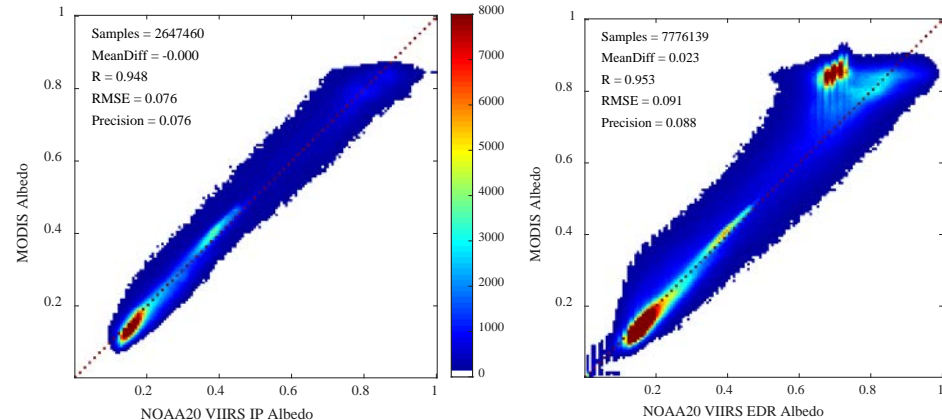

NOAA-20 NDE albedo vs. MODIS albedo

Spring Case: 20180309

MODIS Daily Mean Albedo

N20 VIIRS EDR Albedo

NOAA 20 and MODIS albedo agrees under most land cover types, except snow-covered regions. The filled albedo from climatology (included in VIIRS EDR layer) shows more significant difference over snow, demonstrating that the NOAA 20 albedo climatology in Antarctic region should be improved.

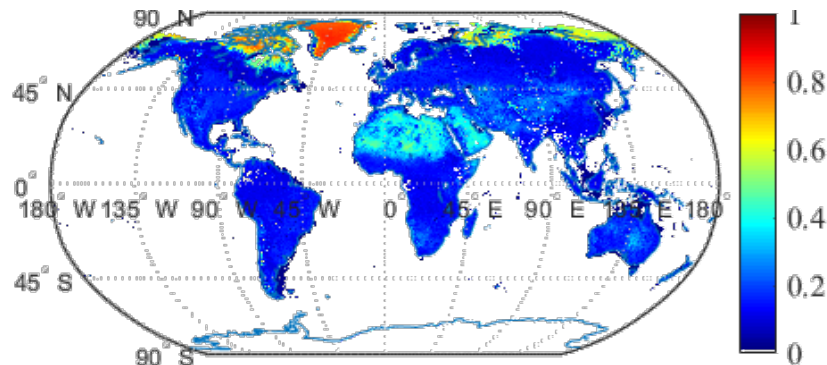

The Open Shrubland and Grasslands pixels with larger discrepancy are also influenced by snow in this season.

- | | |
|-------------------------------|---------------------------------------|
| 1 Evergreen Needleleaf Forest | 9 Savannas |
| 2 Evergreen Broadleaf Forest | 10 Grasslands |
| 3 Deciduous Needleleaf Forest | 11 Permanent Wetlands |
| 4 Deciduous Broadleaf Forest | 12 Croplands |
| 5 Mixed Forest | 13 Urban and Built-Up |
| 6 Closed Shrubland | 14 Cropland/Natural Vegetation Mosaic |
| 7 Open Shrubland | 15 Snow |
| 8 Woody Savannas | 16 Barren or Sparsely Vegetated |

NOAA 20 NDE albedo vs. MODIS albedo

Summer Case: 20180609

VIIRS EDR Albedo

NOAA 20 and MODIS albedo agrees under most land cover types, except snow-covered and needleleaf forest pixels.

NOAA 20 VIIRS albedo and SNPP VIIRS albedo shows better agreement than NOAA 20 and MODIS albedo.

NOAA-20 VIIRS LST against ground data

Site wide statistics

SITE	Sample count	Accuracy (Bias)	Precision (Std of Error)
Bondville_IL	31	0.0343	0.1321
Boulder_CO	40	0.0093	0.0538
Desert_Rock_NV	79	-0.0103	0.0214
Fort_Peck_MT	47	0.0874	0.1248
Goodwin_Creek_MS	42	0.0227	0.1093
Penn_State_PA	15	0.0260	0.0207
Sioux_Falls_SD	28	-0.0123	0.0743
Overall		-0.021	0.089

Note: the L1RD albedo requirement for Accuracy and Precision are 0.05 and 0.08 albedo unit, respectively.

The results above is based on SNPP LUT allied for NOAA-20
Improvement is expected after LUT update for NOAA-20

Beta Maturity Conclusions

- NOAA-20 LSA Product has been verified and preliminarily validated. The product is suggested being released as beta maturity version.
- Some issues and problems are found that will be solved or improved for the provisional release:
 - Metadata has occasional errors.
 - The DQF is redundant to PQI, that should be removed.
 - NOAA-20 Albedo data is slightly worse than the requirement; further calibration of the LUTs and Climatology data are needed
 - Upstream data missing is a concern for albedo data continuity
 - Reference data collection for covering surface seasonal variation is critical for provision release.
 - Snow/sea-ice surface validation needs more efforts

Check List - Beta Maturity

Beta Maturity End State	Assessment
Product is minimally validated, and may still contain significant identified and unidentified errors	Yes. Product has been validated using the most reliable method, but still seasonally limited number of independent global in situ matchups
Information/data from validation efforts can only be used to make initial qualitative or very limited quantitative assessments regarding product fitness-for-purpose	Yes. Validation efforts initially proved the availability of the N20 Albedo product, but further calibration and improvement is still needed to meet the product requirement
Documentation of product performance and identified product performance anomalies, including recommended remediation strategies, exists	Yes

Documentations (Check List, 1 slide)

Science Maturity Check List	Yes ?
ReadMe for Data Product Users	Yes
Algorithm Theoretical Basis Document (ATBD)	Yes
Algorithm Calibration/Validation Plan	Yes (and update version is in preparation)
(External/Internal) Users Manual	Yes
System Maintenance Manual (for ESPC products)	Yes
Peer Reviewed Publications (Demonstrates algorithm is independently reviewed)	In preparation
Regular Validation Reports (at least annually) (Demonstrates long-term performance of the algorithm)	Yes

- Comprehensive validation
 - Over multiple land cover types, especially snow/sea-ice
 - Over more seasons including Autumn and Winter
 - Develop the monitoring tool
 - Validation plan update
 - Extended cross-comparisons
- Future Cal/Val activities
 - LUTs update
 - Climatology update
 - Provisional Maturity Review
 - Validated maturity Review
- Application in NOAA climate models
- Improved albedo products
 - NOAA-20 Gridded Surface Albedo Product
 - Blended Albedo product with S-NPP VIIRS Albedo

Thanks for Your Review !
