

## NOAA JPSS Monthly Program Office

# AMP/STAR FY20 TTA

Lihang Zhou, DPMS Deputy  
Bonnie Reed, Algorithm Sustainment Lead  
Alisa Young, AMP Deputy for Science  
& JPSS STAR Program Manager

October 9, 2020

## VIIRS I-band Active Fire Product transitions to operations

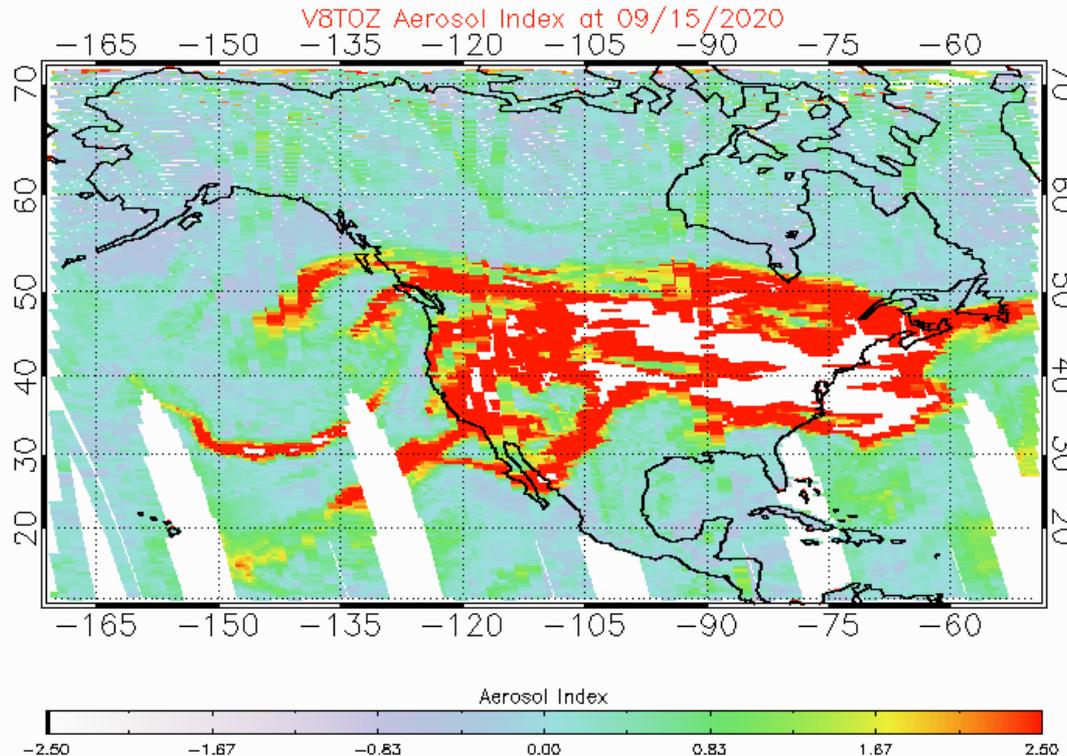

**Figure.** I-Band Fire Radiative Power overlaid on VIIRS True Color imagery from JSTAR Mapper

The 375 m VIIRS I-band Active Fire product transitioned to NDE operations on September 30, 2020. The product includes hot spot detections at three confidence levels, corresponding fire radiative power (FRP) retrievals, and a full classification of each VIIRS I-band pixel into clear land, water and cloud categories. The product takes advantage of the highest I-band spatial resolution of measurements available from VIIRS, while using radiometric measurements from the dedicated VIIRS 750m “fire” band M13 for FRP retrievals.

After a transitional period, this product will eventually fully replace the current baseline 750m M-band product in NDE operations.

## Smoke blankets continental United States

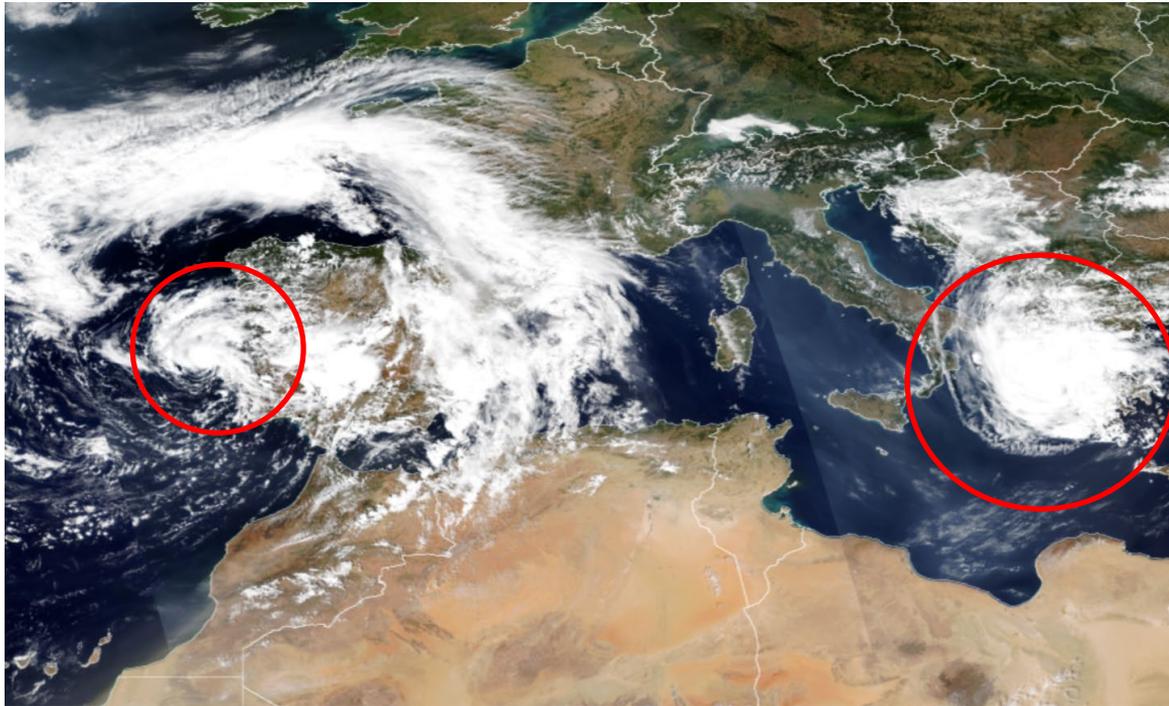

Large wildfires broke out in northern California, Oregon, and Washington, burning hundreds of thousands of acres.

The smoke from these fires initially covered the West Coast in a thick layer of smoke that affected air quality at ground level.

Eventually the smoke was lofted into the upper troposphere, where the jet stream advected it over the eastern US. This caused hazy skies and brilliant sunsets over that area for several days. The smoke eventually reached as far as northern Europe.

Several JPSS instruments measure smoke aerosols, including VIIRS, and OMPS. The OMPS Aerosol index for September 15 is shown at right show very high smoke levels over much of the US.

## JPSS sees two tropical-like cyclones impacting Europe

**Figure.** NOAA-20 VIIRS True Color imagery from 18 Sep 2020 showing tropical cyclones impacting Europe.

The 2020 Atlantic Hurricane season was already a record breaker by mid-September, with an unusually high number of named storms. It took an even stranger turn, when an extratropical low pressure system off the coast of Portugal made the transition to become Tropical Storm Alpha. This was the first verified impact on continental Europe of a tropical storm.

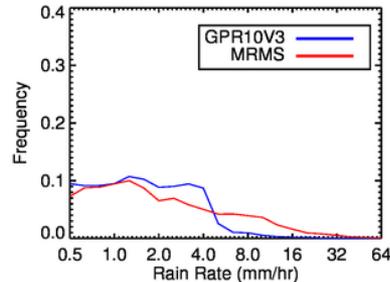

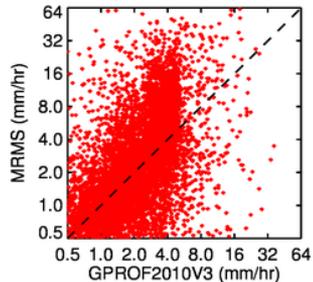

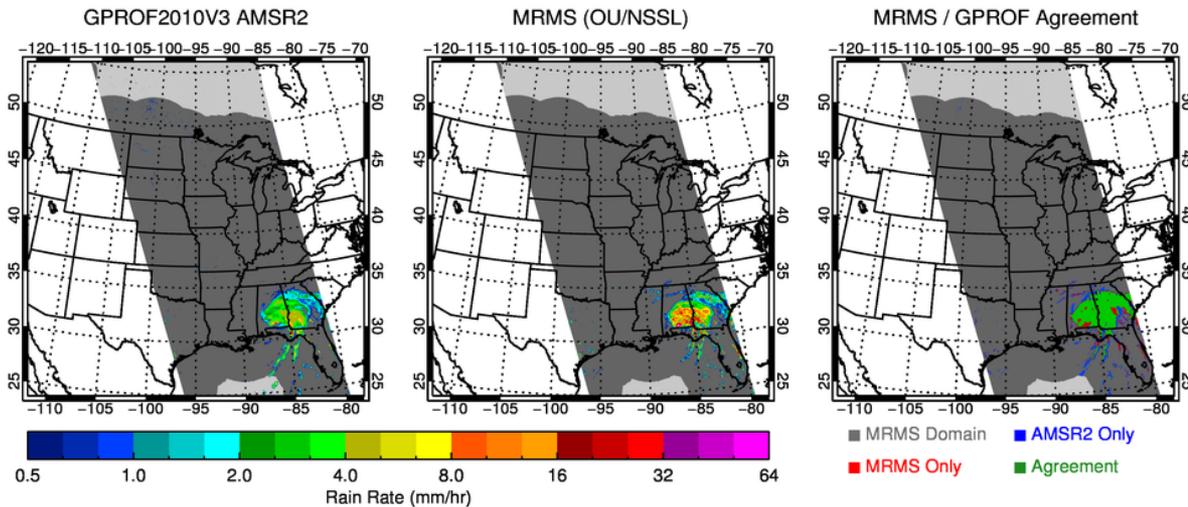

At the same time, a low pressure in the Adriatic Sea had also acquired tropical characteristics and became a rare Medicane named Ianos.

JPSS, which provides global coverage twice daily, from each of its two satellites was able to capture both of these landfalling storms.

# Highlights from the Science Teams

## GCOM-W AMSR2 instrument measures extreme rain in Hurricane Sally

AMSR2 & MRMS Precipitation Rate – GPROF2010\_20200916–1912UTC

**Reference Statistics**

**RMSD** : 6.11 mm/hr  
**r** : 0.37  
**POD** : 74.8%  
**FAR** : 21.5%

The 2020 Atlantic Hurricane season has featured a record number of US mainland landfalls (10) from named tropical systems.

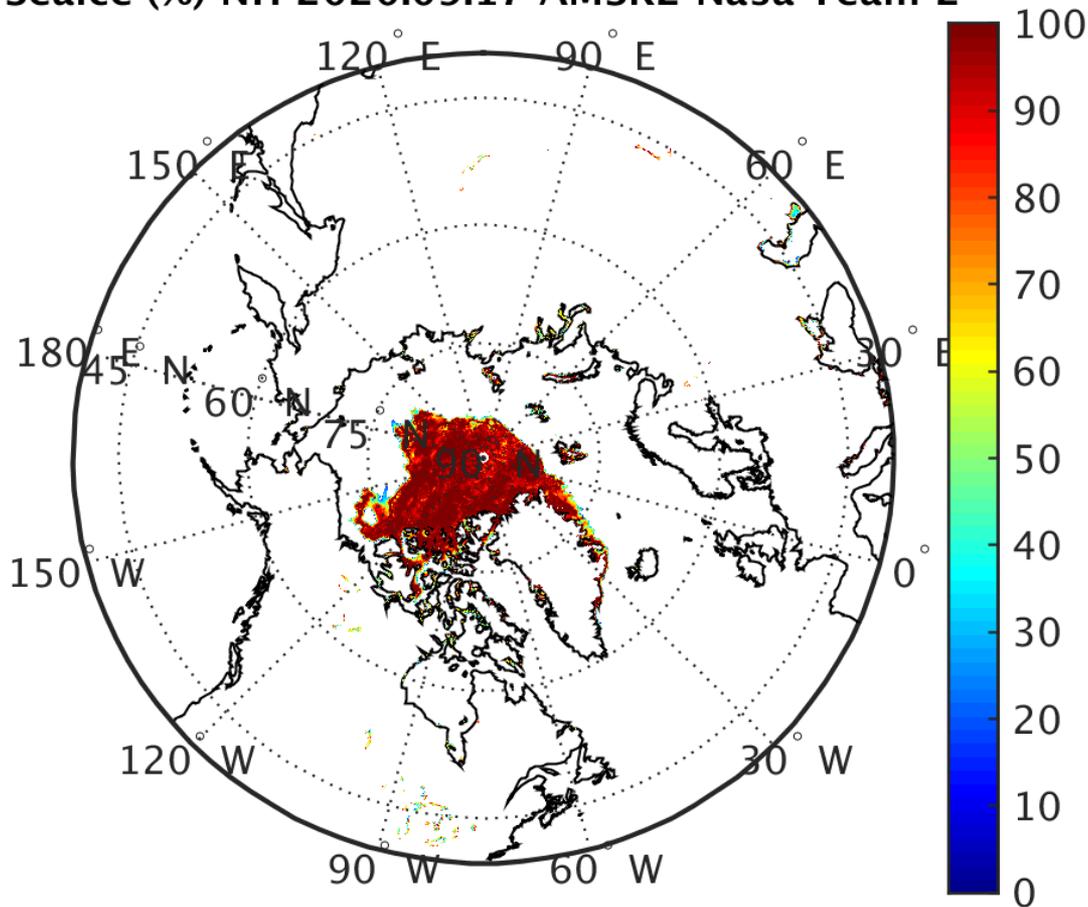

Among those was Hurricane Sally, which formed off of the east coast of Florida before moving northwest towards Pensacola, Florida.

The storm was relatively slow moving and dumped large quantities of rain on Alabama, the Florida Panhandle, and Georgia.

AMSR2 measured this high rainfall rate. The maps and graphs at left compare the satellite derived rates to those from the ground radar based MRMS. The two are in good agreement.

## Near record low Arctic sea ice extent observed with AMSR2

Seaice (%) NH 2020.09.17 AMSR2 Nasa Team 2

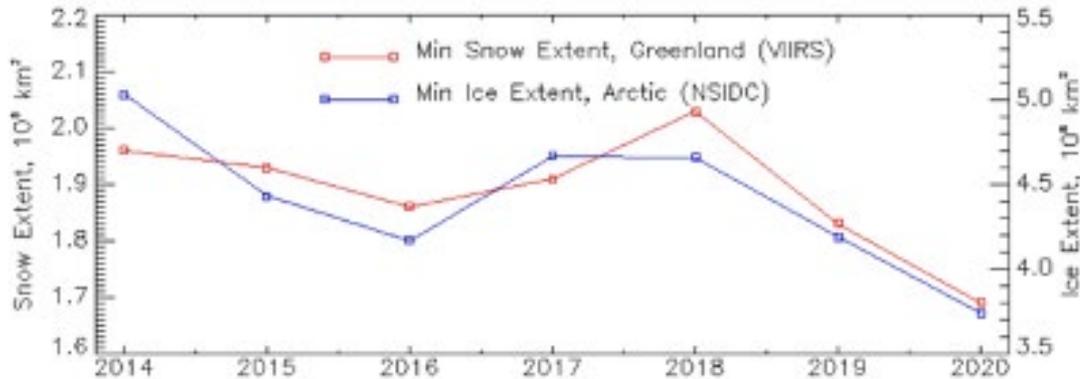

Sea ice extent has been declining for most of the near 40 year period during which satellite data has provided accurate measurements.

This year was no exception. Sea ice in the Arctic Ocean reached the 2<sup>nd</sup> lowest annual minimum level on record (higher only than 2012). The microwave instrument AMSR2 provides a good source of measurement of sea ice extent.

The map at left show the minimum sea ice extent with large amount of melting north of Alaska, Russia, and Europe.

# Highlights from the Science Teams

## VIIRS-derived yearly minimum snow extent over Greenland correlates well with yearly minimum ice extent in the Arctic

The cryosphere team processed VIIRS-based daily gridded snow fraction maps for the last seven summer seasons (2014 to 2020) to estimate year-to-year changes of the minimum snow extent in Greenland.

Although the overall relative range of change of the snow extent (equal to about 17%) is noticeably smaller than the range of change of the minimum ice extent (~26%), the two parameters are obviously well correlated. Correlation between the two environmental parameters indicates that similar physical processes may affect their year-to-year changes. It also suggests that VIIRS retrievals of snow cover properties are accurate, robust and consistent over time and thus may provide a valuable input to climate change studies.

# Accomplishments

- **Delivery Algorithm Packages (DAPs) - Mission Unique Products:**
  - 9/14/2020: ATMS SDR team delivered DAP (ADR9393/CCR5198, JPSS-2 ATMS PCT Initial Submission) to ASSISTT
  - 9/30/2020: ASSISTT team delivered ATMS DAP (ADR9393/CCR5198, J2 ATMS PCT Initial Submission) to DPMS
  - 9/8/2020: CrIS SDR team delivered DAP (ADR8820/CCR5199, CrIS Optimal thresholds for spike detection and correction algorithm, Enable spike detection) to ASSISTT team
  - 9/25/2020: ASSISTT team delivered CrIS SDR DAP (ADR8820/CCR5199, CrIS Optimal thresholds for spike detection and correction algorithm, Enable spike detection) to DPMS AIT
  - 9/22/2020: CrIS SDR team delivered DAP (ADR9415/CCR5213, CrIS J2 Sensor Characteristic PCT) to ASSISTT team
  - 9/30/2020: ASSISTT team re-delivered VIIRS J2 initial DAP (ADR8821/CCR5114, 44 J2 LUT files) to DPMS AIT
  - 8/31/2020: OMPS SDR team delivered DAP (ADR9095/CCR5172, high resolution OMPS NM SDR) to ASSISTT team
  - 9/29/2020: ASSISTT team delivered OMPS DAP (ADR9095/CCR5172, high resolution OMPS NM SDR) to DPMS AIT
- **DAPs – Enterprise Products:**
  - 9/14/2020: I-Band Active Fires Patch DAP (fixed the issue that occurs when input granules start/end times straddle the 2359 UTC - 0000 UTC time of day; and production rules updated for PersistentWaterRef files) delivered to NDE. This updated DAP went to operations on 9/30/2020 (NDE Build 2.0.25)
  - 9/18/2020: JPSSRR V2R3 Patch DAP delivered to NDE (zero second timestamp bug fix)
  - 10/1/2020: JPSSRR Super DAP V3R0 (includes JRR & VPW, initial J2 DAP & NPP/N20 updates) delivered to OSPO for SCR (software code review)
  - 9/28/2020: VIIRS Surface Type team delivered VIIRS 2019 Global Gridded Annual Surface Type product. The new product is ready for users to download at STAR JPSS website: <https://www.star.nesdis.noaa.gov/jpss/>. There are three product packages (each package includes three files: Readme; 8-bit binary file for the global map; ENVI header providing important meta data info):
    - [2019 AST IGBP types in Sinusoidal projection](#)
    - [2019 AST IGBP types in Lat/Long](#)
    - [2019 AST 20 types in Lat/Long](#)
- **IDPS Builds Checkouts:**
  - STAR submitted Report for Block 2.3 Mx0 SOL deploy regression review/checkout to DPMS/RTN/OSPO on 9/28/2020

# Accomplishments – JPSS Cal Val Supports

- NOAA-20/S-NPP Operational Calibration Support:

S-NPP	Weekly OMPS TC/NP Dark Table Updates	09/01/20, 09/08/20, 09/15/20, 09/22/20, 09/29/20
NOAA-20	Weekly OMPS TC/NP Dark Table Updates	09/01/20, 09/08/20, 09/15/20, 09/22/20, 09/29/20
S-NPP	Bi-Weekly OMPS NP Wavelength & Solar Flux Update	09/08/20, 09/22/20
NOAA-20	Bi-Weekly OMPS NP Wavelength & Solar Flux Update	09/02/20, 09/15/20, 09/29/20
S-NPP	Monthly VIIRS LUT Update of DNB Offsets and Gains	09/23/20
NOAA-20	Monthly VIIRS LUT Update of DNB Offsets and Gains	09/23/20

- 9/03/2020: I-Band Active Fires Operational Readiness Review (ORR)
- 9/16/2020: SPSRB Brief on Declaring “VIIRS I-Band Active Fires” Operational
- 9/30/2020: I-Band Active Fires Operational (NDE Build 2.0.25)
- 9/15/2020: EDR Algorithm Update Reviews for JPSS-2
  - MiRS
  - SFR (Snow Fall Rate)
  - NUCAPS
- 9/28/2020: Algorithm Update Reviews for JPSS-2: Delta OMPS SDR
- **Algorithm Update Reviews for JPSS-2 All Complete**
- 9/17/2020: September 2020 NOAA-20 Calibration/Validation Maturity Review
  - Validated Maturity Review for: GST (Global Gridded Surface Type)
- 10/7/2020: Land team submitted NOAA-20/S-NPP VIIRS L3 Global Gridded Validation Reports for:
  - Land Surface Temperature
  - Surface Albedo

# Upcoming Cal/Val Maturity Reviews

---

- December, 2020 Maturity Review:
  - Full Validated Maturity:  
NUCAPS CO<sub>2</sub> product (S-NPP & NOAA-20)
- 2021 Maturity Review (TBD, ~Q2FY21):
  - Full Validated Maturity:  
OMPS NP Ozone EDR (V8Pro)

- JSTAR Code/LUT/Product Deliveries:

DAP to DPES:

- Oct-20: Initial J2 PCT to DPMS AIT (CrIS SDR. Sep-20 delivered to ASSISTT)
- Jan-21: Initial J2 LUTs (OMPS SDR. Dec-20 to ASSISTT; Jan-21 to DPMS)

NOAA-20 Algorithm DAP to NDE/CoastWatch:

- Oct-20: Initial J2 DAP (JRR/VPW/LST/LSA, include NPP/N20 updates)
- Oct-20: Initial J2 DAP (Surface Reflectance, include NPP/N20 updates)
- Nov-20: Initial J2 DAP (SST/NUCAPS/MiRS, include NPP/N20 updates)
- Dec-20: Initial J2 DAP (VI/GVF/Ozone, include NPP/N20 updates)
- Dec-20: Vegetation Health – Final N20 DAP, and initial J2 DAP
- Dec-20: Ocean Color – Final N20 DAP, and initial J2 DAP

# FY20 STAR JPSS Milestones

Milestones	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
<b>Algorithm Updates DAPs</b>				
OMPS DAP: Remove VIIRS SnowIce and QST tile dependency (ADR8550)	Oct-19	Oct-19	10/28/19	
OMPS: J2 pre-launch sensor characterization report	Dec-19	Aug-20	08/14/20	Need NASA sharepoint access permission
ATMS: J2 pre-launch sensor characterization report	May-20	Aug-20	08/13/20	PSR changed
CrIS: J2 pre-launch sensor characterization report	May-20	Jul-20	07/30/20	PSR changed
J2 pre-launch Algorithm Updates Review - SDRs and Imagery	Jun-20	Jun-20	06/16/20 09/28/20: Delta OMPS SDR	
J2 pre-launch Algorithms/PCT/LUT packages - SDRs and Imagery	Aug-20	Dec-20	08/11/20 VIIRS LUTs 09/29/20 OMPS Algo 09/30/20 ATMS PCT	PSR changed
OMPS: High resolution SDR implementation (12km x 10km OMPS TC, ADR9095)	Aug-20	Sep-20	08/31/20 to ASSISTT 09/29/20 to DPMS AIT	
Imagery: All 16 M-bands as Imagery EDRs	Sep-21	Sep-21	RTN will work on this	Work_under_PCR
N20 NUCAPS final DAP to NDE	Nov-19	Nov-19	11/01/19	
N20 Vegetation Health final DAP to NDE	Mar-20	Dec-20		With init J2 DAP To ASSISTT: Jul-20
I-band Active Fires DAP to NDE	Mar-20	Jun-20	06/24/20	With init J2 DAP Need J2 test data
J2 pre-launch Algorithm Updates Review - EDRs	Sep-20	Sep-20	07/21/20: Part A 08/18/20: Part B 09/15/20: Part C	
Initial J2-ready EDR DAPs (include NPP/N20 updates)	Sep-20	Dec-20	06/24/20: Active Fires	10/1/20: JRR DAP to OSPO for SCR
AST-2019 (VIIRS Annual Surface Type)	Sep-20	Sep-20	09/28/20	

# FY20 STAR JPSS Milestones

Milestones	Original Date	Forecast Date	Actual Date	Variance Explanation
<b>Algorithm Cal/Val</b>				
J2 Cal Val Plans - Draft Delivery (all SDR/EDR products)	Jun-20	Jun-20	06/30/20	
N20 NUCAPS Full Validated Maturity (all NUCAPS products except CH4 & CO2)	Oct-19	Oct-19	10/28/19	
N20 Land Surface Temperature Full Validated Maturity	Nov-19	Nov-19	11/21/19	
N20 Surface Albedo Full Validated Maturity	Nov-19	Nov-19	11/21/19	
N20 OMPS NP SDR Full Validated Maturity	Jan-20	Apr-20	04/23/20

## Accomplishments / Events:

- Generated the first version of JPSS-2 ATMS Processing Coefficients Table (PCT) and validated PCT using both S-NPP and NOAA-20 science RDR data with modified parameters
- Prepare the PCT submission package, including document, auxiliary data, and ADL patches, to ASSISTT for third party verification
- Verify IDPS Block 2.3 Mx0 ATMS SOL data to ensure the lunar intrusion correction code/PCT updates are implemented correctly.
- Set up JPSS VPN/Cloud account and attend JPSS DPMS cloud ADA migration training to prepared for IDPS data verification in future
- Create NOAA-20 vs. S-NPP ATMS science data inter-sensor cross calibration trending modules
- Finish updating JPSS-2 ATMS pre-launch TVAC data evaluation tools and revisit both JPSS-1 and S-NPP ATMS pre-launch TVAC data to improve the analysis quality
- Keep updating ATMS SDR ATBD and Users' Guide documents
- Attend IEEE TGRS 2020 virtual meeting and present ATMS SDR related findings

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

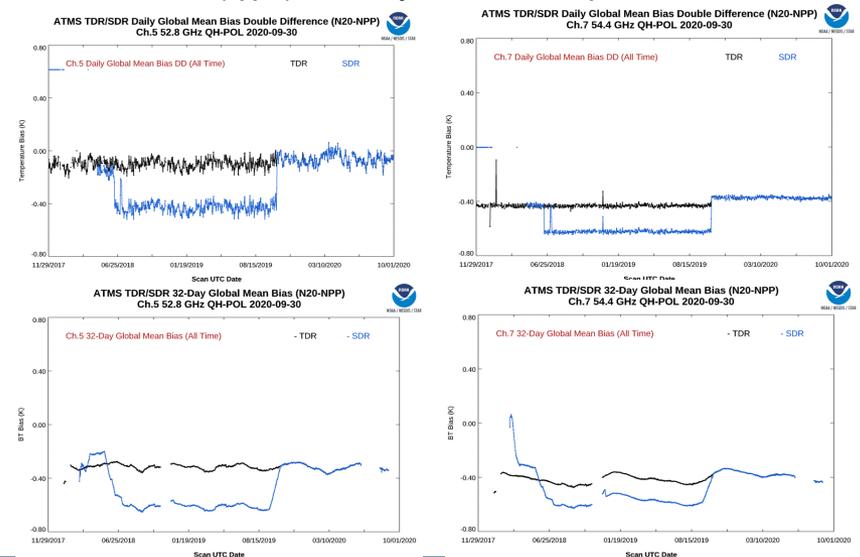

- Project has completed.
- Project is within budget, scope and on schedule.
- Project has deviated slightly from the plan but should recover.
- Project has fallen significantly behind schedule, and/or significantly over budget.

## Issues/Risks:

None

## Highlights:

### NOAA-20 vs. S-NPP ATMS inter-sensor bias through RTM O-B double difference (upper) and 32-day mean direct comparison

Milestones	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
J2 pre-launch test data (TVAC) review/analyze	Apr-20	Apr-20	Apr-20	TVAC: Dec-19
J2 pre-launch evaluation tools development	Sep-20	Sep-20	Sep-20	
J2 Cal/Val Plan - draft delivery	Jun-20	Jun-20	06/30/20	
Pre-launch sensor characterization report	Jun-20	Aug-20	08/13/20	PSR + 3m
Algorithm update based on pre-launch test data and other changes (e.g. APID, sampling frequency, FSW, and RDR)	Sep-20	Sep-20	Not needed	PSR + 6m
PCT update based on pre-launch test data and other changes	Sep-20	Sep-20	09/30/20	PSR + 6m 8/26/20: DRAT
Algorithm Updates Review	Jun-20	Jun-20	06/16/20	
J2 SDR data (based on TVAC) available for EDRs	Apr-20	Apr-20	03/25/20	Proxy Data
ATMS TDR/SDR discrepancy between ADL and IDPS over lunar intrusion regions (ADR 9035)	Sep-20	Sep-20	04/27/20	
NOAA-20 and S-NPP cross-calibration/comparison	Sep-20	Sep-20	Sep-20	
Annual ATMS TDR/SDR performance report	Feb-20	Feb-20	Feb-20	
Verification of cloud implementation	Sep-20	Q1 FY21		B2.3 TTO
<b>IDPS Mx build I&amp;T deploy regression support:</b>				
BL2.1 Mx 8 I&T ATMS data review/checkout	Nov-19	Nov-19	11/13/19	
BL2.2 Mx 0 I&T ATMS data review/checkout	Apr-20	Apr-20	04/01/20	
BL2.2 Mx 1 I&T ATMS data review/checkout	Jun-20	Jun-20	06/19/20	

## Accomplishments / Events:

- The NOAA-20 CrIS instrument has shown four events of noise increase at MWIR FOV5 since September 2019 (**Fig 1**). This anomaly seems to be associated with the effect of accumulation of electric charge within the instrument readout-integrated-circuit (ROIC) and amplifiers circuitry. The performance is being closely monitored
- Made progress on the ADL code change to the FCE algorithm (**Fig. 2**). An option for enabling it operationally includes a new quality flag in QF4 and a new parameter in the PCT LUT table. The results show that the new quality flag and the PCT parameter work properly as expected.
- Prepared and delivered package to turn on CrIS Spike Detection and Correction Algorithm based on IDPS Block 2.2 Mx1 (ADR 8820, CCR 5199). Demonstrated that the optimal thresholds for Spike Detection and Correction Algorithm were found using IDPS Block 2.1 Mx8. The new thresholds significantly reduced the false alarm cases.
- Delivered a package for JPSS-2 CrIS PCT initial submission (ADR 9415) for IDPS J2 testing on September 22, 2020. Since there is no J2 CrIS RDR data available, at this time, it was decided to rename the J2 CrIS PCT/AUX files as J1, using J1 RDR data in IDPS Block 2.2 Mx1, and deliver the files with J2 name. This would help to perform the testing of the initial J2 CrIS PCT/AUX files.
- Due to the recent recovery of the SNPP CrIS instrument and the high quality of the CrIS calibrated observations, CrIS observations from the SNPP and NOAA-20 CrIS instruments have been assimilated by NWP centers during the 2020 Hurricane season (**Fig 3**). Having CrIS observations in the same orbit, and separated by 50 minutes, provides continuity, redundancy and enhance critical capabilities needed for weather forecasting and environmental monitoring.

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

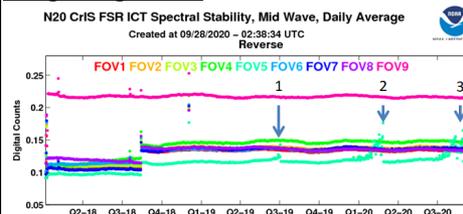

1. Project has completed.
2. Project is within budget, scope and on schedule.
3. Project has deviated slightly from the plan but should recover.
4. Project has fallen significantly behind schedule, and/or significantly over budget.

## Issues/Risks:

The GST contractor, Yong Chen, leaved the CrIS Team on September 27, 2020. The Team is re-organizing to cover the large experience and the support that Yong provided to the CrIS Team in the CrIS Cal/Val activities.

BL2.2 Mx 1 I&T CrIS data review/checkout	Jun-20	Jun-20	06/18/20	

## Highlights:

(1) Four detected MWIR FOV5 Noise increase anomaly events occurring on NOAA-20/CrIS since September 2019. Noise meets the requirements. Daily monitoring is in progress.

(2) (left) FCE\_CORRECT flag indicating the Earth scene FCEs were corrected successfully (red pixels), (right) FCE count was recorded correctly in the SDR product for both positive and negative fringe count shifts.

(3) Combination of CrIS observations from NOAA-20 (left) and S-NPP (right) at 900 cm<sup>-1</sup> during the development of the tropical cyclone Laura, on August 26, 2020, improves temporal and spatial coverage.

## Accomplishments / Events:

- Completed checkout of IDPS Block 2.3 Release Mx0 using NOAA-20 and S-NPP VIIRS SDR radiometric and geolocation products generated on the SOL system in the Cloud that confirmed correct implementation of the VIGMU code change: reported findings to the STAR JPSS project and recommended deployment of the updated code on the IDPS I&T system
- Delivered for deployment in IDPS operations updated NOAA-20 and S-NPP DNB offset and gain ratio LUTs generated using new moon calibration data from 9/17/2020
- Supported STAR/GRAVITE/AIT Cloud Migration Working Group in preparations for the IDPS and ADA transitions to the Amazon Cloud

BL2.2 Mx1 I&T VIIRS data review/checkout	Jun-20	Jun-20	06/17/20	

## Highlights:

VIIRS SDR geolocation changes expected for the M-bands after the VIGMU deployment in IDPS Block 2.3 Mx0 shown for the 10:54 UTC granule from 9/14/2020: the up to 80-90 m changes are smaller than ~10% of the M-band pixel size and are expected to improve VIIRS geolocation accuracy

## Accomplishments / Events:

- Delivered the J2 OMPS SDR code package to the DPMS via the ASSISTT team, which includes the J2 NM SDR high resolution code along with 47 LUTs applicable for SNPP, NOAA-20 NM/NP SDR, and J2 NM/NP. It can be used as an evaluation tool to produce NOAA-20 SDR data with low and high resolutions.
- Completed the JPSS Delta Review for the J2 OMPS NM SDR algorithm.
- Delivered SNPP/NOAA-20 OMPS weekly Dark tables and NP solar irradiance bi-weekly LUTs to GRAVITE
- Verified the LUTs to re-process NOAA-20 OMPS NM/NP to support a urgent action from management
- Compared NOAA-20 NM SDR data with two spatial resolutions to assess impacts of high resolution on radiance and dark.

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule			x		

1. Project has completed.
2. Project is within budget, scope and on schedule.
3. Project has deviated slightly from the plan but should recover.
4. Project has fallen significantly behind schedule, and/or significantly over budget.

### Issues/Risks:

- 1- EDR team requested additional analysis to better understand difference between SNPP and NOAA-20 as part of validation review – review completed 4/23/20, 3 months delayed compared to plan - DRs generated and need to be resolved – resources diverted so lower priority milestones had schedule slip.
- 2- Unable to access OMPS TVAC data – working with AMP to resolve (this issue is resolved)

Milestones	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
Validated Maturity: OMPS-NP	Jan-20	Apr-20	04/23/20	See Issues/Risks

## Accomplishments / Events:

- “The Reprocessing Suomi NPP Satellite Observations” has been published at Remote Sensing, 2020, 12, 2891, doi:103390/rs12182891 (highlights)
- Provided the information for transition of the reprocessed SNPP SDR data at [ftp://jlrdata.umd.edu/pub/SNPP\\_Reprocessing](ftp://jlrdata.umd.edu/pub/SNPP_Reprocessing) to Cloud requested by the COVID-19 study (CEOS ACC, Shobha)
- Joined the discussions with JPSS program office and NCEI/CLASS and coordinated with NCEI/CLASS to resume the transition of the reprocessed SNPP data to NCEI/CLASS
- Completed SNPP CrIS V2 SDR reprocessing
- Extending the reprocessing of SNPP VIIRS data to 2019 is ongoing

## Overall Status:

Milestones	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
Development of VIIRS reprocessed data dissemination interface	Sep-20	Sep-20	Feb-20	
Optimize SDR reprocessing package	Sep-20	Sep-20	Jul-20	
Evaluation of impact of reprocessed VIIRS SDR data on cloud mask product	Sep-20	Sep-20	Dec-19	
Finish V2 SNPP CrIS reprocessing	Sep-20	Sep-20	Sept-20	
Develop reprocessing data website	Sep-20	Sep-20	Jul-20	
Analyze the quality of reprocessed data in a journal paper	Sep-20	Sep-20	Jul-20	
Readme for reprocessed SNPP ATMS, CrIS, OMPS and VIIRS data	Sep-20	Sep-20	Aug-20	
Extend SNPP VIIRS reprocessing to 2019	Sep-20	Mar-21		
Transition of the reprocessed SNPP SDR data to CLOUD	Dec-20	Dec-20		
Transition of the reprocessed SNPP SDR data to CLASS/NCEI	Sept-21	Sep-21		

## Accomplishments / Events:

- Updated the ICVS interactive sensor performance/health status and science data quality trending plots to include additional key parameters at [https://www.star.nesdis.noaa.gov/icvs-beta/index\\_icvs\\_vector.php](https://www.star.nesdis.noaa.gov/icvs-beta/index_icvs_vector.php)
- Developed ICVS sensor performance and science data quality long term statistic calculation matrix (<https://www.star.nesdis.noaa.gov/icvs-beta/metrics.php>) (spacecraft performance parameters are to be added)
- Developed a new flag identifying OMPS south Atlantic anomaly (SAA) region near real time monitoring module and transition the package to ICVS operation
- Kept monitoring and analyzed NOAA-20 CrIS MWIR FOV5 and LWIR FOV2 anomaly events
- Completed the module monitoring OMPS NP geolocation error against NM geolocation

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

- Project has completed.
- Project is within budget, scope and on schedule.
- Project has deviated slightly from the plan but should recover.
- Project has fallen significantly behind schedule, and/or significantly over budget.

## Issues/Risks:

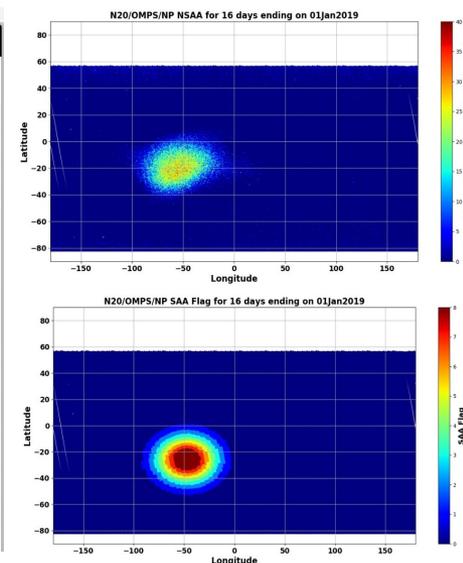

Large ICVS Intersensor task relatively new and original schedule overly optimistic, pushed back ICVS interactive module task schedule due to resource constraints; ICVS-reprocessing tool prototype is removed from the scope of the project

## Highlights: Significantly contribute to STAR SDR Teams

### ICVS Interactive Web Long-term Statistic Trending Products

## Highlights: Image of the Month

VIIRS day fog- RGB image, showing a tidal bore type wave over Antarctica, from 16 September 2020 (Image courtesy of C. Seaman via CIRA's SLIDER realtime display of VIIRS imagery and image products.)

## Accomplishments / Events:

- The ECM team has processed a training dataset that will be used for the next code and Lookup table delivery for JPSS algorithms. This includes the addition of the Day Night Band.
- The Enterprise Cloud products are being used in Alaska as part of the JPSS Aviation Initiative. It began Sep.1, 2020 and will last 90 days for user feedback and product evaluation (Figure 1).
- The Cloud team continues to work on the Enterprise ATBDs
- Continued development on CCL Supercooled/Convective fraction.

JRR v2.3 Patch DAP delivered to NDE			04/29/20 08/10/20 09/18/20	
Annual algorithms/products performance report	Feb-20	Feb-20	Feb-20	
NOAA-20 and S-NPP cross-calibration/comparison	Sep-20	Sep-20	Sep-20	
Cal/Val Visualization tool and LTM webpage development/improvement	Sep-20	Sep-20	Sep-20	
Support Alaska Demo and ESRL usage	Sep-20	Sep-20	Sep-20	

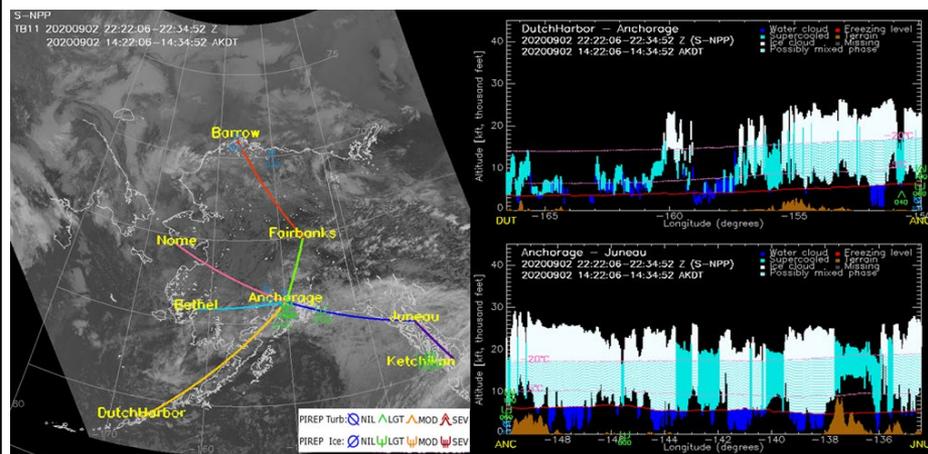

Figure 1. VIIRS IR image with selected flight paths over AK (left) and sample cloud vertical cross-sections (right) with PIREPs and NUCAPS temperature data. The products are available at [http://rammb.cira.colostate.edu/ramstdis/online/npp\\_viirs\\_arctic\\_aviation.asp](http://rammb.cira.colostate.edu/ramstdis/online/npp_viirs_arctic_aviation.asp). The official JPSS Alaska Cloud Demonstration as part of the JPSS Aviation Initiative started from Sep.1, 2020 and will last 90 days for user feedback and product evaluation.

## Accomplishments / Events:

- Aerosol team using SNPP+NOAA-20 VIIRS AOD to understand impact of recent CA/OR/WA Wildfires on air quality (see highlight)

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

- Project has completed.
- Project is within budget, scope and on schedule.
- Project has deviated slightly from the plan but should recover.
- Project has fallen significantly behind schedule, and/or significantly over budget.

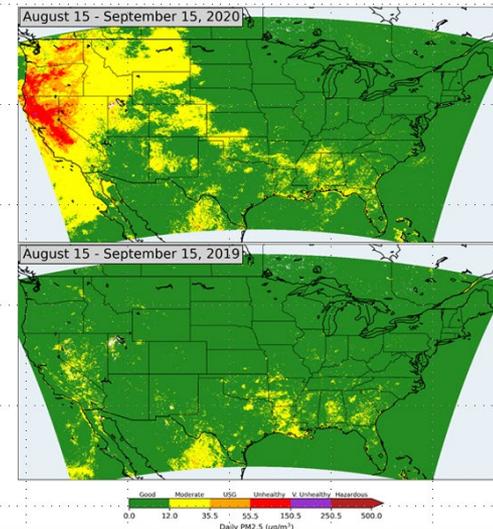

## Issues/Risks:

No risks

## Highlights:

Impact of CA/OR/WA Wildfires: Surface PM2.5 Estimated from SNPP+NOAA-20 VIIRS AOD, 2020 vs 2019

- Because of fires and the need for information, we began running the new algorithm that derives PM2.5 using SNPP+NOAA-20 VIIRS AOD
- Figure shows mean PM2.5 due to fires leading to unsafe air quality compared to what it was in 2019

## Accomplishments / Events:

- Completed JSTAR project management review for volcanic ash EDR
- Advanced objectives of VOLCAT DACS and VOLCAT Cloud Pilot projects: First (of many) VOLCAT workflow components successfully demonstrated in the NESDIS Cloud
- Compared VOLCAT results from S-NPP and NOAA-20 (see highlight)
- Developed tools for validating VOLCAT volcanic radiative power
- Visualized J2 proxy data and found it to be unacceptable for meaningful algorithm testing

## Overall Status:

## Highlights:

Volcanic clouds evolve rapidly, so we look for physically consistent cloud evolution in consecutive NOAA-20 and S-NPP overpasses. In this case (Popocatepetl, Mexico), the later overpass (S-NPP) shows a decrease in mass loading and effective radius with a much smaller decreases in height, as is expected for a dispersing ash emission.

## Accomplishments / Events:

- Performed a comparison of ice surface temperature (IST) from VIIRS and the Microwave Integrated Retrieval System (MIRS). An ice concentration comparison is underway.
- Multi-year comparison of VIIRS and AMSR2 sea ice concentration shows that the two agree well at temperatures below about 267K, but the bias and RMS differences increase dramatically around the melting point.
- The NOAA AMSR-2 sea-ice concentration data stream is scheduled for NCEP Central Operations (NCO) operational implementation on 6 October 2020.
- VIIRS-derived yearly minimum snow extent over Greenland correlates well with yearly minimum ice extent in the Arctic. The team processed VIIRS-based daily gridded snow fraction maps for the last seven summer seasons (2014 to 2020) to estimate year-to-year changes of the minimum snow extent in Greenland.

## Overall Status:

## Accomplishments / Events:

- Completed ORR and SPSRB Briefing for the VIIRS I-band product
- The VIIRS VIIRS I-band Active Fire product transitioned to NDE operations on September 30
- Worked with the CSPP team on the evaluation of data anomalies and a potential fix
- Worked with the SSEC RealEarth™ team on the inclusion of global VIIRS I-band product and identified SDR issue
- Provided support for VIIRS I-band impact assessment for the HRRR-smoke team for impact analysis
- Set up ftp link for Western US target area
- Restored STAR production of the experimental VIIRS I-band product after an unexpected SCDR data outage
- Provided material on VIIRS fires to JPSS Science Advisor for PMC briefing

## Overall Status:

## Highlights:

An example of the NDE operational VIIRS I-band Active Fire product, showing clear land (green), clear water (blue) and fire hot spots (shades of red) in Australia. Suomi NPP 9/30/2020, 15:53 UTC.

## Accomplishments / Events:

- The surface reflectance team developed an approach to ensure that all pixels impacted by the NOAA-20 VIIRS I3 bad detector are properly assigned a missing value and flagged as invalid retrievals.
- The change, which affects less than 1.5% of the pixels, is implemented in the code package update that also includes readiness for the JPSS-2 satellite.

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget	x				
Technical / Programmatic	x				
Schedule			x		Delay in J2 initial DAP delivery

- Project has completed.
- Project is within budget, scope and on schedule.
- Project has deviated slightly from the plan but should recover.
- Project has fallen significantly behind schedule, and/or significantly over budget.

**Issues/Risks:** J2 initial DAP delivery is now scheduled for August 2020. Low impact on schedule and performance.

## Highlights:

An example of NOAA-20 VIIRS I3 surface reflectance retrievals before (top) and after (bottom) of the code change, where spurious retrievals are replaced by missing values. The data are from the spatial window 18-19 N, 24-27 E on August 1, 2020 at 11:14 UTC and represent a case with higher-than-typical impact.

**Mike Wilson, IMSG@STAR**

## Highlights: L3 SNPP VIIRS LST validation with SURFRAD data

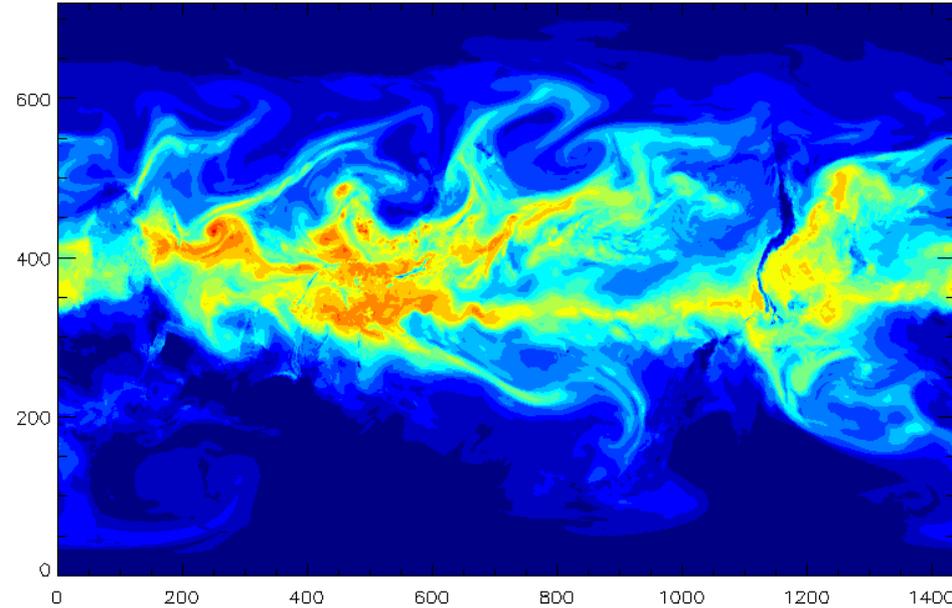

- TPW forecast error is assessed with NCEP reanalysis tpw data
- Three forecast hours 06z, 12z, and 18z were evaluated using forecast hour F06. The data in 2018 and 2017 were used in this study.
- The preliminary result indicates a small bias between analysis and forecast and RMSE less than 0.5 cm.

ERA5 TPW for 01/15/2018 12z

NCEP forecast TPW (0.25 degree resolution) 01/15/2018 12z

The PWV is calculated from the available specific humidity, pressure and temperature profiles:

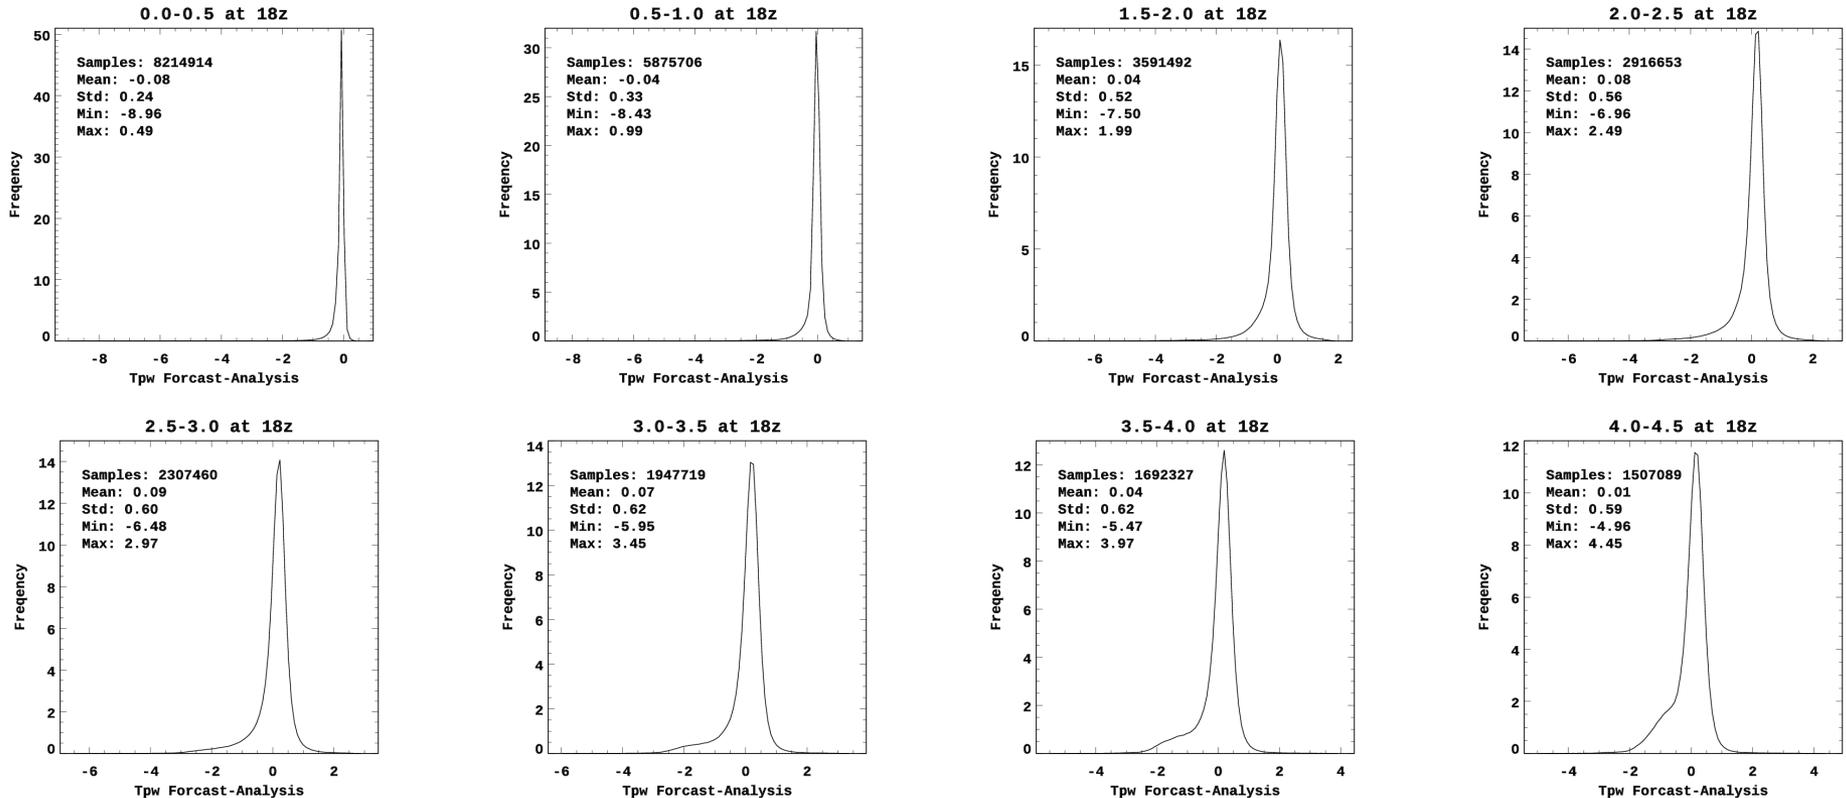

$$PWV = \frac{1}{\rho_w g} \int_{P_s}^0 q(P) dP \quad (1)$$

where  $\rho_w$  is the water density ( $1000 \text{ kg m}^{-3}$ ),  $g$  is the gravitational acceleration at the station model level altitude,  $q(P)$  is the mixing ratio (g/kg) of water vapour.

ERA5 of ECMWF reanalysis data was used to validate the NCEP forecast tpw.

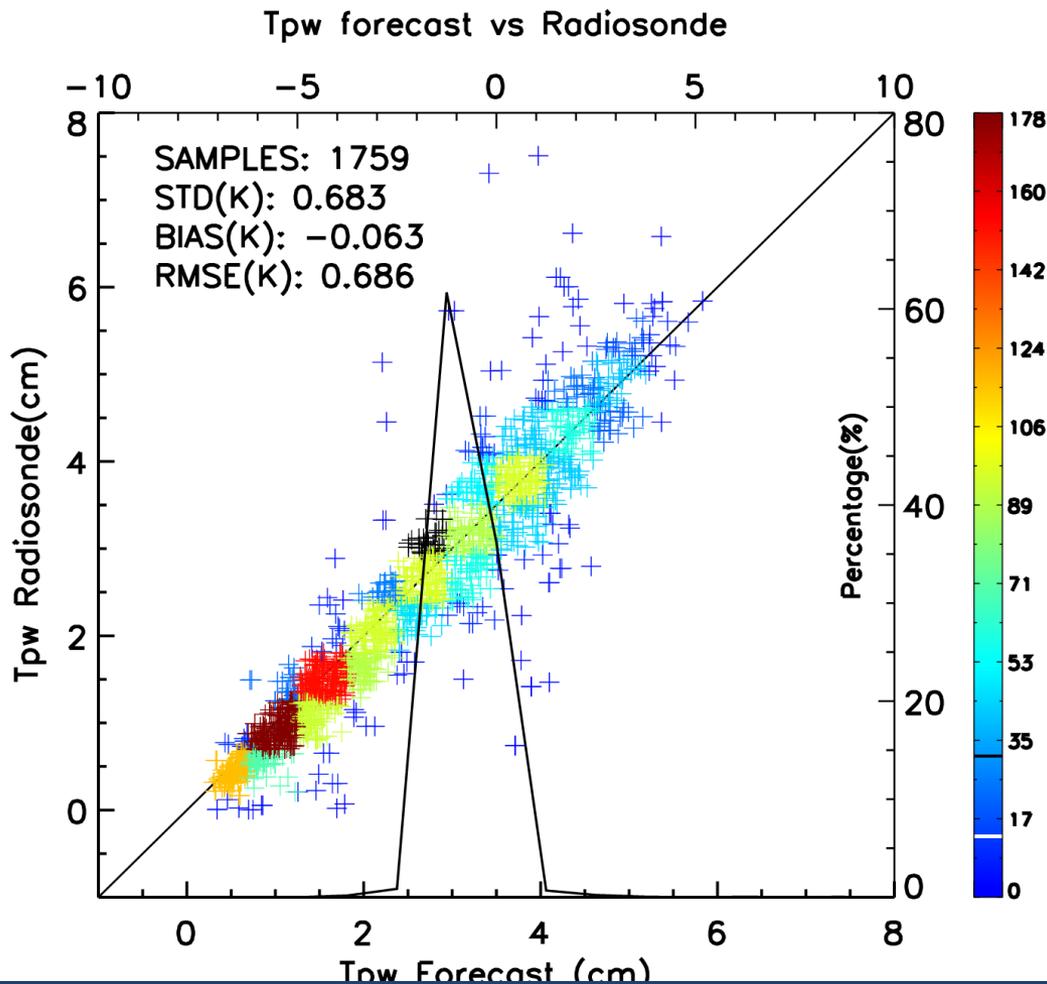

The image comparison between ERA5 tpw and forecast tpw indicates an overall consistent tpw distribution.

# Forecast TPW vs tpw calculated from ECMWF reanalysis profile

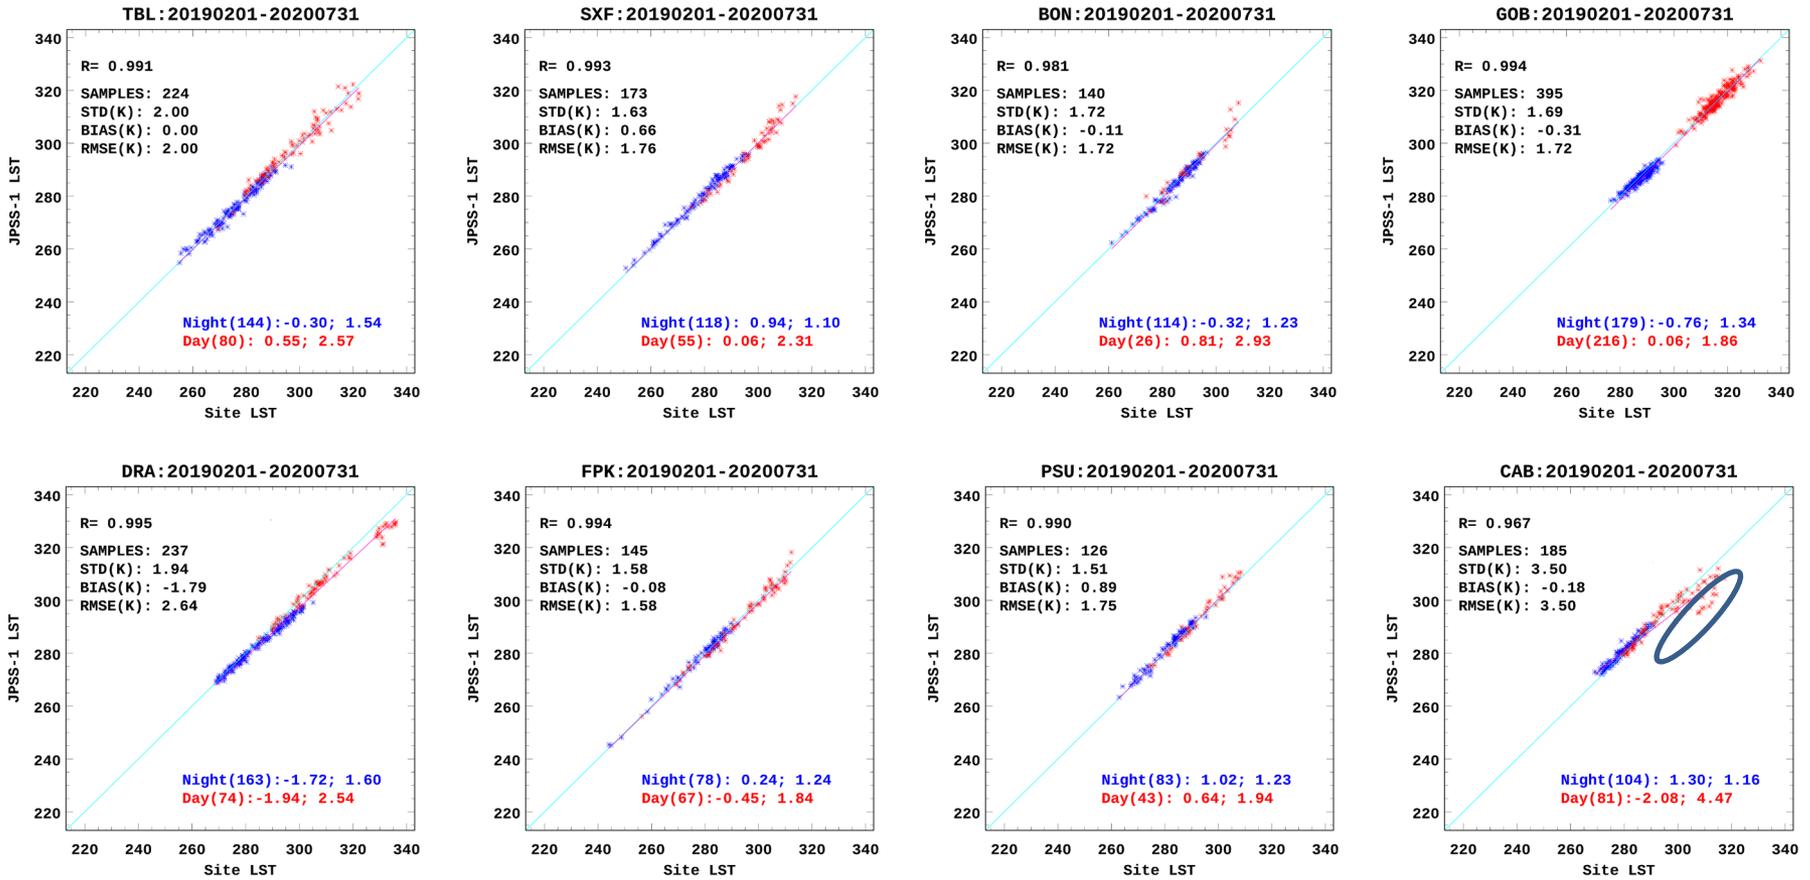

- ERA5 hourly reanalysis data for 2018 and 2017 were used as the data source.
- The NCEP forecast tpw is close to ECMWF with nearly zero bias and STD less than 0.6 cm. Outliers are observed from the tpw calculated from ECMWF reanalysis data.

# Forecast TPW vs Radiosonde TPW

- Overall nearly zero bias between radiosonde tpw and forecast tpw
- Some outliers were observed from the comparison results
- Two records with abnormally high tpw i.e. 23.56 and 11.4cm
- Two records with negative tpw value, which were removed in the scatter plot.

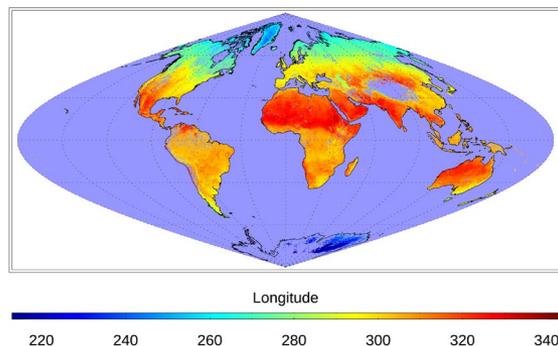

The radiosonde data is selected for GOES-R ABI radiance based validation  
 There are 19 sites in CONUS for the time period from April. 28 to July 26<sup>th</sup>, 2018  
 The pressure level varies for different site and observation time

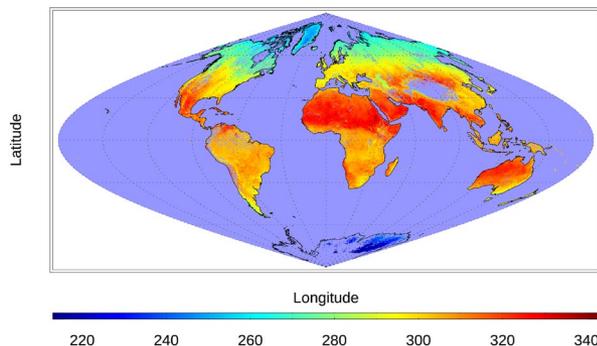

- Most recent data covering the time period from 02/01/2019 to 07/31/2020
- For both daytime and nighttime datasets
- In-situ data from 6 sites of SURFRAD and 2 sites of BSRN stations
- Results indicate close agreement between the VIIRS and the in-situ LSTs, with absolute bias less than 1 k and STD less than 2 K over most sites.

# Inter-comparison-N20 LST and SNPP LST (Daytime)

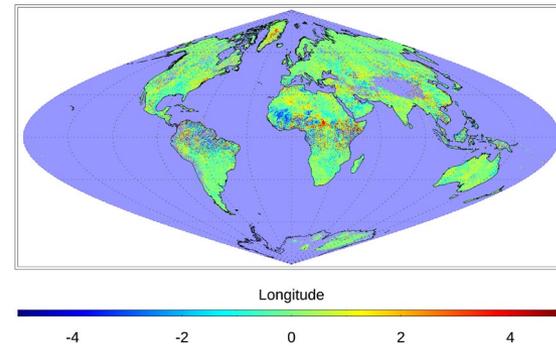

NPP mean LST : 2020092-2020123 D

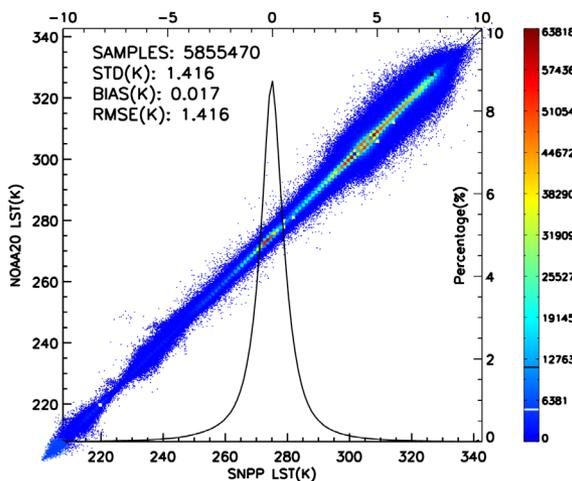

N20 mean LST : 2020092-2020123 D

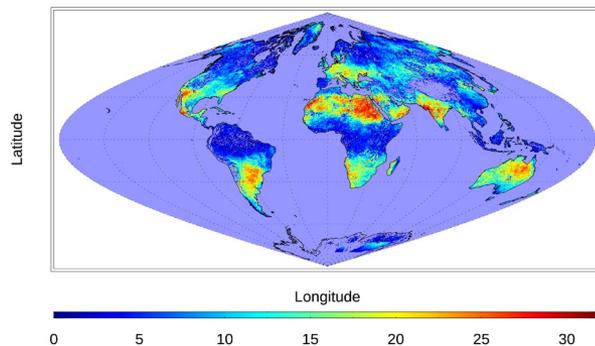

Enterprise Gridded LST Mean Diff 3 D

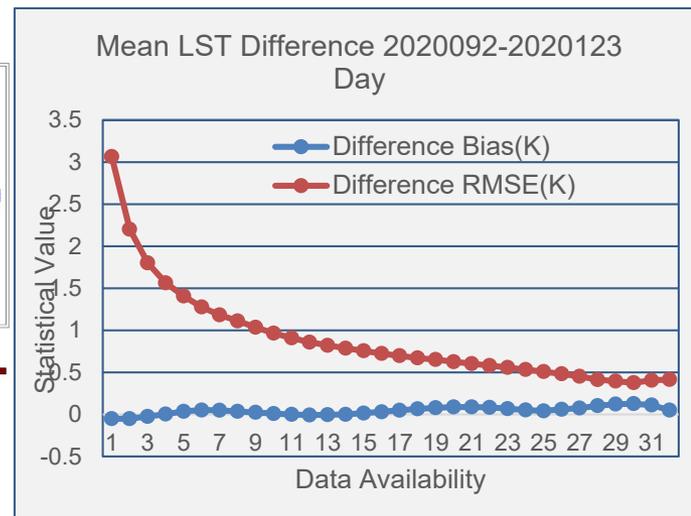

SNPP vs NOAA20 LST on 2020092-2020123 D

Er Data Availability Distribution 2020123 D

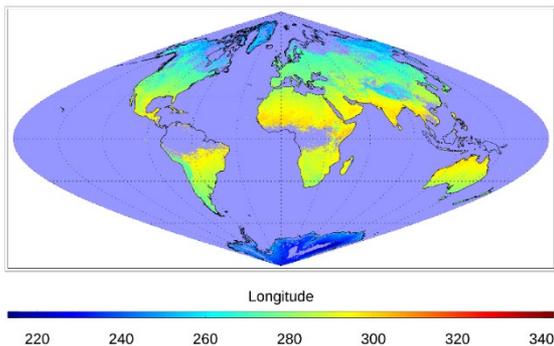

Difference Statistics over Data Availability

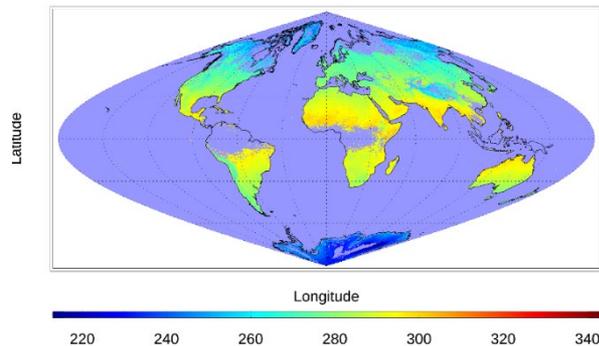

- SNPP and NOAA20 LST difference mean within an orbit cycle of 32-day
- Overall consistency observed with nearly no bias and the difference RMSE is 1.4 K. The LST difference is smaller in temperature below 300K.
- The statistics decreases with the data availability.

# Inter-comparison-N20 LST and SNPP LST (Nighttime)

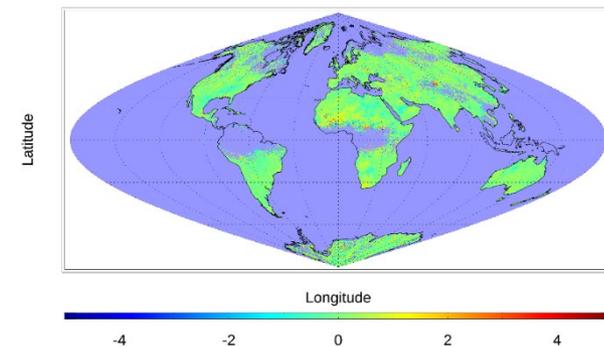

NPP mean LST : 2020092-2020123 N

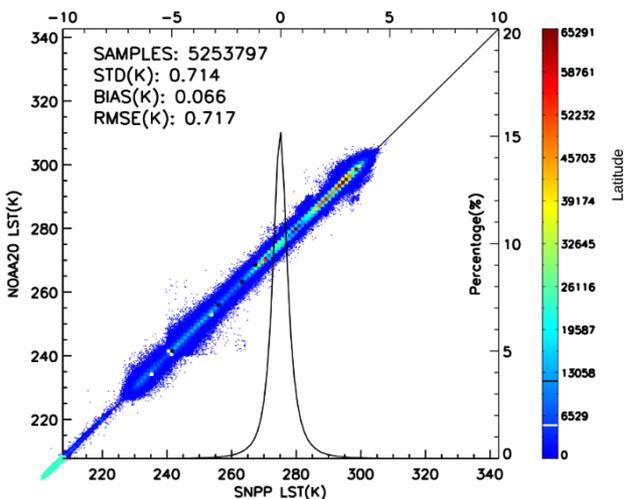

N20 mean LST : 2020092-2020123 N

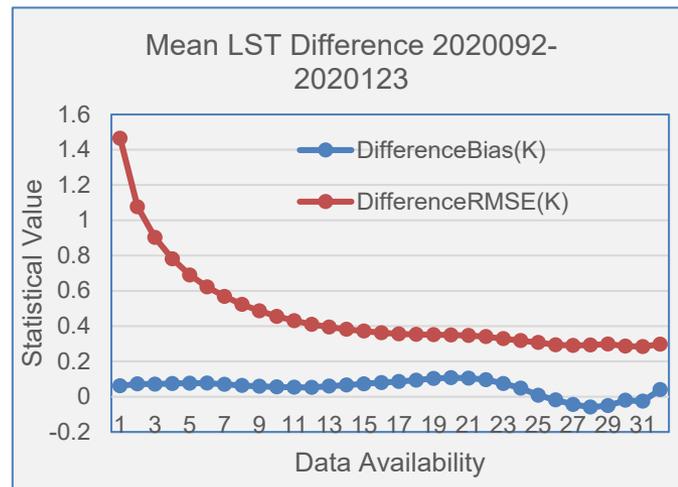

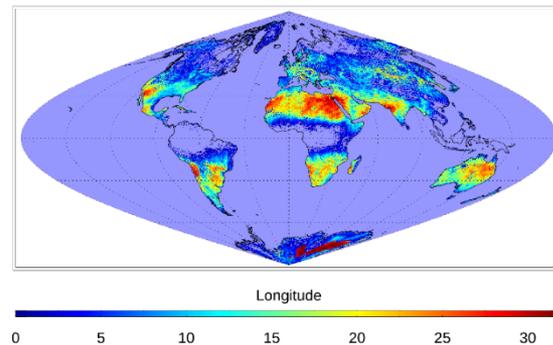

Enterprise LST Mean Diff: 2020092-2020123 N

SNPP vs NOAA20 LST on 2020092-2020123 N

Enterprise LST Mean Count: 2020092-2020123 N

- SNPP and NOAA20 LST difference mean within an orbit cycle of 32-day
- SNPP and NOAA20 LST are overall consistent with nearly no bias and the difference RMSE is 0.7K.
- Low latitude LST are not available due to cloud.

## Accomplishments / Events:

- Implemented the L3 LTM monitoring system, including the 1) in-situ validation using SURFRAD and ARM-SGP networks; 2) cross-comparison functions. The extra functions including 3) anomaly detection and 4) climatology update modules are on the way.
- Complete the L3 gridded albedo validation report.
- Updated the L2 LTM system, including 1) updating the cloud detection algorithm; 2) Added the ARM SGP stations; 3) Convert the in-situ data into a standard NETCDF format
- Responded to the consultant from operational team to solve an issue in system test, which is about the offline running fail, found to be related to missing of climatology data in specific tiles.
- Completed the VIIRS albedo manuscript and sent out for internal review.

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

- Project has completed.
- Project is within budget, scope and on schedule.
- Project has deviated slightly from the plan but should recover.
- Project has fallen significantly behind schedule, and/or significantly over budget.

## ARM-SGP

The L2 LTM system is upgraded to improve the 1) ground albedo data quality through cloud detection algorithm update; 2) adding the ARM-SGP stations for validation.

### Accomplishments / Events:

- VI v2r1 regression test between the ASSISTT run and local run was conducted. Regression test was passed.
- NPP vs. NOAA20 evaluation for VI and GVF products to be completed by the end of September.
- Updated NDE Vegetation Products System (NVPS) External User Manual version 4.0.

### Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation

Deep-dive analysis for the anomaly watch	Sep-20	Sep-20	Sep-20	

# Updated NDE Vegetation Products System (NVPS) External User Manual version 4.0

NDE Vegetation Products System (NVPS) External User Manual was updated to reflect the changes in VI algorithm of Version v2r1

Three major changes are made:

1. The VI algorithm description section was rewrote
2. The VI qualify flags were re-designed
3. VI data quality assessment was added

# VI v2r1 regression test (1)

Data for comparison

- Local run VI data (Apr 1-16, 2020)

- ASSISTT run VI data (Apr 1-16, 2020)

Both dataset include

- 2 satellite (J01, NPP)

- 3 composite periods (daily, weekly, biweekly)

- 2 coverages (global, regional)

- Each file has 13 variables (3 VIs, 5 reflectances, 3 angles, 2 QFs)

Each day:  $2 \times 3 \times 2 \times 13 = 156$  pairs of datasets (scatter plots)

16 days of daily, weekly and biweekly VI data are compared

All 13 variables are showed for the case of J01 biweekly global VI

Only EVI scatter plot is showed as an example for other cases

# NPP vs. NOAA20 comparison

Document is being prepared describing NPP vs. NOAA20 comparisons for VI and GVF products

Global statistical analysis of NPP vs. NOAA20 for all VI products and individual site comparisons for GVF were conducted as part of NOAA20 VI/ GVF validated maturity review

Global statistical analysis of NPP vs. NOAA20 for GVF will also be included in the summary document.

Individual day comparisons demonstrate GVF bias usually  $< 1\%$  and RMS difference of around 5%

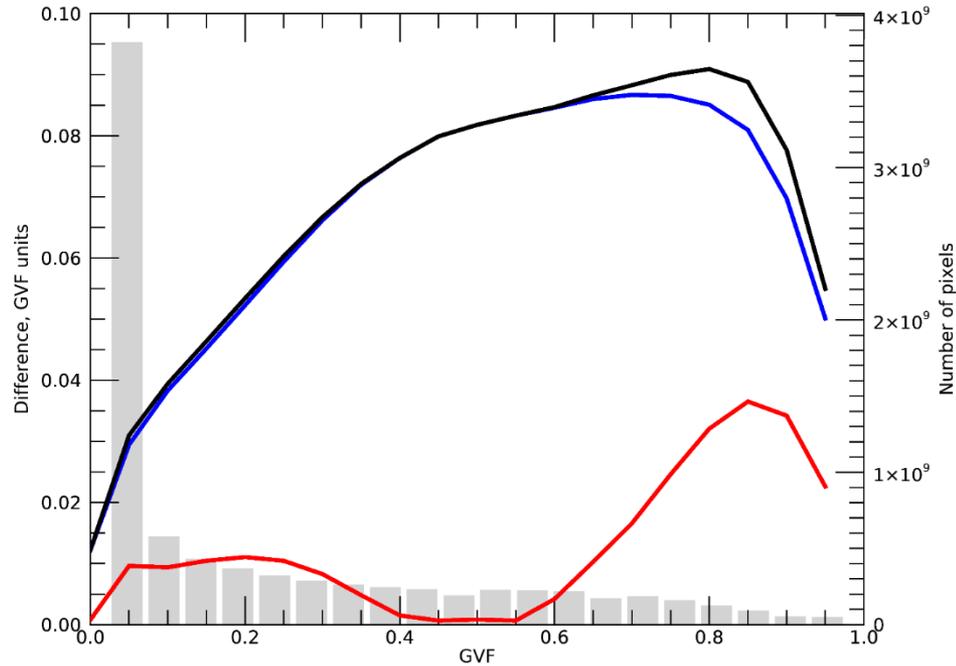

Differences are greater during the first several days of the GVF time series due to lower amounts of data available to the smoothing algorithm. This indicates that historical data should be kept for use in case of an interruption to GVF production

Further analyses are being conducted to see how much of these differences can be attributed to orbital shifts, by comparing 16 day and 32 day average GVF between NPP and NOAA20

NPP vs. NOAA20 comparisons show good consistency between the two satellites, as expected due to the satellites being in similar orbits and data coming from VIIRS instruments with the same design

The observed consistency between the NPP and NOAA20 vegetation products indicate that generating combined NPP/NOAA20 products should be possible and may add value

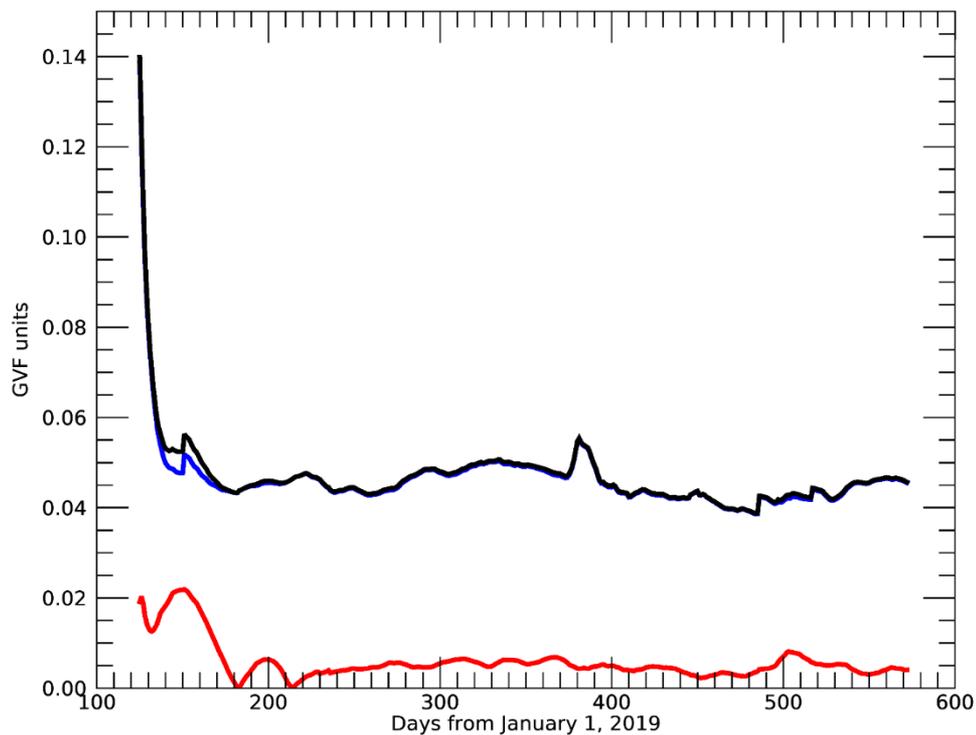

# NPP vs. NOAA20 statistics, stratified by GVF value

**Bias**  
**Standard deviation**  
**RMS difference**

Gray bars show number of pixels in each of 20 bins.

# NPP vs. NOAA20 GVF statistics time series

Bias  
 Standard  
 deviation  
 RMS difference

## Accomplishments / Events:

- Restored crontab jobs, which was totally stopped due to system update;
- Tested five versions of Locust-VH figures;
- Updated monthly and weekly locust maps, especially for some missing cases;
- Investigated storage for disaster recovery;
- Surveyed several climate indices, such as ENSO, IOD, and SAM, and correlated with VH indices, focusing on Australia and Kenya (highlighted);
- Generated a series of data and figures of VIIRS/VHP-1 and -4, -16 km resolution products, covering September 2020.

## Overall Status:

## Accomplishments / Events:

Routinely producing global ocean color products from VIIRS SNPP and NOAA-20.

Continued the work for the improvement of the MSL12 ocean color data processing system.

Continued the work for the improvement of the OCView tool and ocean color product routine data monitoring system functions well.

Worked on Linux-6 to Linux-7 issues/problems and IT computer reboot issues.

New buoy (M270) was deployed for Moby on September 6th, replacing M269 which had been in the water for an extended period of time. Team is currently evaluating the quality of M270 data before posting on Coastwatch.

Made progress for self-shading instrument corrections in water (see highlight)

## Highlights: Progress on methodology to correct for instrument self shading for the in water measurements.

The figure shows the shadowing correction for two wavelengths. Over most geometries the shadow factor is within 2% of 1 (1 means no shadow), but certain geometries (buoy between collector and sun, sun directly overhead) the shadow can become more significant. Team is finishing a paper describing this correction and the uncertainties associated with the correction, and team will work on implementing the correction into the data stream (along with stating measurement uncertainty).

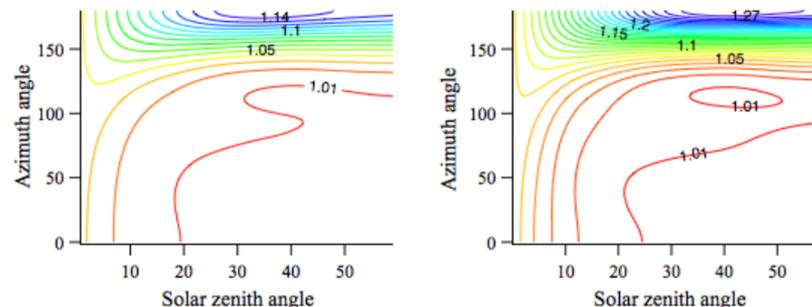

Figure: Shadow correction for two wavelengths, 440 and 560 nm. Azimuth is between the direction the arm is pointing and the solar direction, 180 degrees is when the main buoy is between the collector and the sun.

## Accomplishments / Events:

- ACSPO 2.80 (J2-ready + VIIRS thermal fronts + L3S-PM VIIRS code) delivered to ASSISTT in late Aug, one month ahead of schedule. ASSISTT delivery to NDE is planned in Nov'20.

## Highlights:

Improved tandem polar wind Quality Control understanding:

Figure 1 (top) – Histogram shows Mode near 0 for difference between proxy for actuals and VIIRS tandem winds

Figure 2 (bottom) – Scatterchart shows that single Quality Index is not predictive of final quality – more work is needed

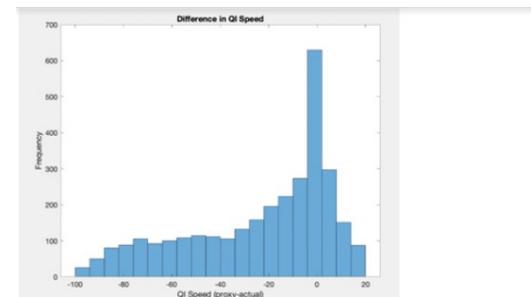

Figure 1: Histogram of differences between the Proxy and Actual QI Speed, for high quality winds with a Actual QI Final > 80.

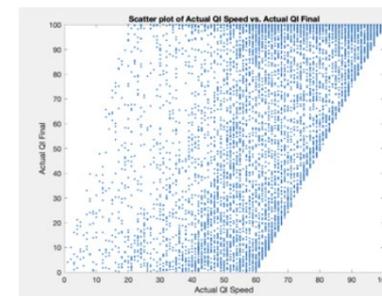

Figure 2: Scatter plot of Actual QI Speed vs QI Final.

## Accomplishments / Events

The NUCAPS team presented JPSS-2 algorithm updates to the JPSS Program office (9/15) and the presentation was well received.

NUCAPS retrievals of CO2 using JPSS and N2O are tested and the results are reasonable.

The initial validation of NUCAPS OLR data products are completed, further revision of the code was conducted.

Continued work in numerous areas - SO2 flag into the NUCAPS operations and validation plans, averaging kernels, SNO retrievals, IR-only retrieval optimization, implementation of Ammonia product retrieval, and collaborative support activities with the STAR SDR teams as well as NOAA-GML

## Highlights

NUCAPS Soundings product shows recent microbursts

NUCAPS sounding over Palmdale, CA: During the afternoon of 18 August 2020, clusters of intense thunderstorms developed over the San Gabriel Mountains, in which an isolated storm cell generated a severe microburst near Palmdale, CA.

## Accomplishments / Events:

- The latest MiRS software package (v11.6) was delivered to the UW/SSEC for integration into the direct broadcast software system CSPP. The package has now been fully integrated and cross-compared with STAR outputs, and is being released as CSPP\_MIRS 2.4.
- Testing with a neural network based radiometric bias correction for ATMS continues. Application of a regression post-processor appears to improve the initial neural network bias prediction for channel 1 (see highlights). Other channels are currently being tested.
- N20-SNPP intercomparisons and LTM visualizations sent in separate ppt package.

## Overall Status:

Limb SDR and EDR to operations	Feb-20	Jun-20	06/16/20	NDE errors
J2 pre-launch test/proxy data review/analyze	Sep-20	Sep-20	Sep-20	
J2 Cal/Val Plan - draft delivery	Jun-20	Jun-20	05/21/20	
Initial J2 ready DAP to ASSISTT	Jul-20	Oct-20	7/7/20 V8Pro	With NPP/N20 updates
Initial J2 ready DAP to NDE (include NPP/N20 updates)	Dec-20	Dec-20		
Algorithm Updates Review	Sep-20	Sep-20	08/18/20	08/18/20
RT Tables with Wavelengths, Bandpasses	Jul-20	Jul-20	07/07/20	SDR Bandpass
V8TOz with Cloud top optical centroid algorithm	Aug-20	Apr-21		Priorities
Annual algorithms / products performance report	Feb-20	Feb-20	Feb-20	
NOAA-20 and S-NPP cross-calibration/comparison	Sep-20	Sep-20	Sep-20	
Cal/Val visualization and LTM tool development/improvement	Sep-20	Sep-20	Sep-20	

Highlights: The Ultraviolet Absorbing Aerosol Index values from the total ozone retrieval product for the Ozone Mapping and Profiler Suite track the progress of large amount smoke as they are transported away from fires in California. Figure for September 16, 2020

## Accomplishments / Events:

- AMSR2 sea ice concentration scheduled for NCO operations. The NOAA AMSR-2 sea-ice concentration data stream is scheduled for NCEP Central Operations (NCO) operational implementation on 6 October 2020.
- The rain rate product provided an excellent depiction of Hurricane Sally as it made landfall along the gulf coast on Sept. 16.
- The NOAA AMSR2 sea ice concentration product provides an excellent depiction of Arctic sea ice melt north of Alaska from July to September. This year Arctic sea ice extent is very low, approaching but not quite reaching the 2012 record minimum. There is extensive open water across the Arctic
- Daily composites of VIIRS (Enterprise) and AMSR2 Sea Ice Concentration (SIC) differences were compared in terms of the VIIRS Ice Surface Temperature (IST) starting from 1 February 2018 through 30 June 2020. The results show that AMSR2 SIC is consistently 1-2% less than VIIRS from 230 to 269 K. However, at about 270 K the bias rises significantly and becomes slightly positive, at around 2% in the 270-272 K temperature range. As IST approaches melting and beyond there is a precipitous decrease in the bias. This indicates that VIIRS SIC is consistently higher than AMSR2 in melting environments.

## Overall Status:

	Green <sup>1</sup> (Completed)	Blue <sup>2</sup> (On-Schedule)	Yellow <sup>3</sup> (Caution)	Red <sup>4</sup> (Critical)	Reason for Deviation
Cost / Budget		X			
Technical / Programmatic		X			
Schedule		X			

1. Project has completed.
2. Project is within budget, scope and on schedule.
3. Project has deviated slightly from the plan but should recover.
4. Project has fallen significantly behind schedule, and/or significantly over budget.

## Issues/Risks:

None

Milestones	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
Annual report on AMSR2 algorithms and data products performance	Feb-20	Jun-20	Feb-20 Jun-20	Feb-20: SJASTM Jun-20: Report
Algorithm Cal/Val	Sep-20	Sep-20	Aug-20	
Algorithm improvement/updates implemented in new DAP for NDE	Sep-20	Sep-20	Sep-20	
Complete reprocessing of entire mission dataset of AMSR2	Sep-20	Sep-20	Mar-20	

**Highlights:** AMSR2 sea ice concentration (SIC) ready for NOAA's first data assimilating ocean model! Transition of SIC to NCEP Operations scheduled for 6 October, just in time for transition of the Real-Time Ocean Forecast System – Data Assimilation (RTOFS-DA) transition to operations scheduled for November 2020.

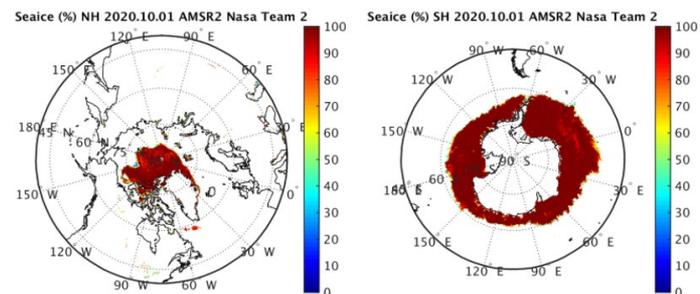

Figure: AMSR2 sea ice concentration on 1 October 2020 for the Arctic (left) and Antarctic (right).

## Accomplishments / Events:

- Maintained daily NPROVS, extended periods in August were reprocessed to fill in data gaps (hardware related)
- Latest NUCAPS v2.7/2.8 "Test" (HEAP) data was reviewed; routine monitoring hindered by Test data stream disruptions
- Access of newly available GRUAN Radiosonde (RS41) and integration into 1) NPROVS and 2) Radiosonde Inter-comparison VALidation (RIVAL) deliverable continued
- Case study was done comparing NUCAPS and MiRS to Drospondes associated with Hurricane Laura (**Highlight**)
- AEROSE field campaign results were generated and included in upcoming JRS special edition (Kuciauskas (NRL) et al.) (**Highlight**)
- Radiosonde Upper Troposphere Humidity Assessments draft paper finalized and reviewed by STAR for JRS Special edition (Sun et al)
- EDR LTM team developed a new calendar based website for improved tracking of missing image products on a daily basis

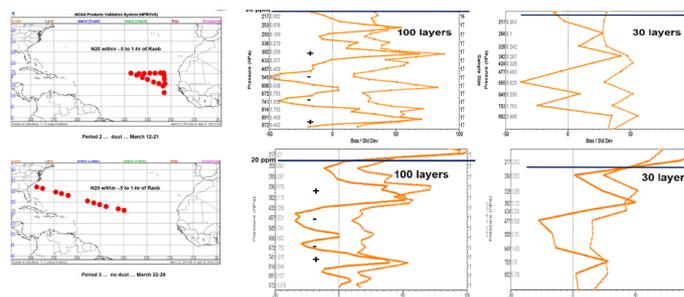

## Overall Status:

## Highlights:

### JPSS Targets NUCAPS Soundings During 2020 AEROSE Campaign

Collocated AEROSE Radiosonde (JPSS funded) and NUCAPS soundings at NOAA-20 overpass inside (top) and outside (bottom) the SAL dust plume show overall similar vertical structure for H2O vapor but elevated differences (bias, standard deviation) inside the SAL; statistics at 30-layers (1.5km resolution) appear more consistent with sensor (CrIS) vertical sensitivity than at 100-layer (500m vertical resolution)

IDAS	Original Date	Forecast Date	Actual Completion Date	Variance Explanation
<b>LTM</b>				
Maintain / expand existing EDR LTM web pages and mappers and provide monthly reports	Sep-20	Sep-20	Sep-20	
<b>NPROVS</b>				
Provide COSMIC (C2) geophysical profiles (T, H2O) assessment	June 20	June 20	June 20	
Facilitate and provide assessment report supporting R20 transition of NUCAPS for v2.5.2 (Q3).	June 20	June 20	June 2020	

NPROVS targeting of NUCAPS, MiRS and ECMWF Analysis sounding fields (left) collocated with dropsondes (D) show good agreement (2<sup>nd</sup> from left). However, of particular interest are collocated soundings (S) associated with the relatively cloud-free circulation center (2<sup>nd</sup> from right) of Hurricane Laura on October 24<sup>th</sup> that are shown in the rightmost panel (ECMWF (up left), MiRS (up right), NUCAPS Test (low right) and NUCAPS Oper (low left)). Such capability for targeting can provide valuable support for NWS (AWIPS-2) users and associated case studies.
