Abstract
The NOAA/STAR Ocean Color team is focused on “end-to-end” production of ocean color satellite products. In situ validation of satellite data is essential to producing the high-quality products required and expected by the international ocean color remote-sensing community. In November 2014, a 10-day cruise was conducted aboard the NOAA Ship Nancy Foster in the western Atlantic along the US mid-east coast with the primary aim of in situ calibration and validation of the Visible Infrared Imaging Radiometer Suite (VIIRS) instrument onboard the Suomi National Polar-orbiting Partnership (SNPP) satellite. This was the first NOAA dedicated VIIRS ocean color validation cruise supported through the NOAA Office of Marine and Air Operations. Collaborating groups included: Naval Research Laboratory; University of Southern Mississippi; City College of New York; University of Massachusetts at Boston; University of South Florida; University of Miami; Lamont-Doherty Earth Observatory at Columbia University; the National Institute of Standards and Technology, NASA/Goddard Space Flight Center and the Joint Research Centre of the European Commission. We present the scope of the observations of inherent and apparent optical properties made in support of the three primary objectives: 1) VIIRS ocean color validation; 2) uncertainty characterization of in situ ocean color measurements and 3) optical characterization of ocean variability. Cruise data will be reposited at NOAA CoastWatch/OceanWatch for convenient public access and will be archived as required by NOAA. A second dedicated VIIRS ocean color cruise is planned for late 2015 and additional NOAA ocean color cruises are anticipated for different regions in the future.

On Station Measurements
In water profiling of ocean radiometry - AOPs
Four instruments deployed simultaneously (HyperPro, MicroPro, C-OPS)
In water profiling of IOPs
Multiple optical packages deployed to measure
• Total absorption
• CDOM absorption
• Scatter, Backscatter
• Fluorometry (chlorophyll, CDOM, phycoerythrin)
In water profiling of other parameters
• Conductivity (salinity)
• Temperature
• Dissolved O2
Surface floating radiometry
• HypersRBR (Saltereks)
• Sky-Blocking Apparatus (SBA)
• Upwelling Radiance Distribution Camera System (NRJARSD)

Above water observations of ocean radiometry
Five instruments (A3D x3; GEF, SR1900) with three gray cards and one blue glass tile developed by NIST
Sun Photometry - 5 instruments - Microposts

Continuous Underway Measurements
Flow-through continuous measurements
• Absorption
• Beam attenuation/scattering
• Backscattering
• Dynamic imaging particle analysis (FlowCam)
• CDOM fluorescence, phytoplankton functional groups, chlorophyll and phytoplankton major groups (ALF, bit AlgalonlineAnalyzr)
• Phytoplankton photosynthetic competency (Mini FIRe)
• SST, salinity, chlorophyll fluorescence (from ship’s system)

On deck continuous measurements
Several above water hyperspectral radiometry optical systems:
• HyperSAS, HyperSAS-POI, Trilos, Bow-mounted HyperPro

Other continuous measurements (from ship’s onboard systems)
• Acoustic Doppler Current Profiler (ADCP)
• Meteorology and environmental data (i.e., wind speed and direction, sea state, air temperature)
• Radiance integrated from 400 to 700 nm (PAR)

Water Sampling and Analyses
Samples collected from Rosette bottles (discrete depths) and from underway flow-through system
• HPLC phytoplankton pigment analyses
• CDOM absorption
• Dissolved organic carbon
• Particulate organic carbon and particulate nitrogen
• Fluorometric extracted chlorophyll—acidification method—non-acidification narrow-band method
• Total suspended matter
• Particle fluorescence and digital imaging (FlowCam)
• Variable fluorescence — Mini FIRe
• Advanced Laser Fluorometer — ALF
• Phycobilipigment concentration
• Filer pad spectral absorption

Fig. 1 NOAA Ship Nancy Foster.

Cruise Objectives
• Observe in situ properties for VIIRS ocean color satellite validation
• Determine uncertainties associated with in situ ocean color measurements
  • among identical instruments and protocols
  • from different instrumentation
  • from different sampling protocols
  • from different post-processing methods
  • from spatial and temporal variability
• Validate ocean processes

Cruise Track and Stations

Fig. 2. Cruise track overlaid onto NOAA MSL12 VIIRS composite image of chlorophyll-a concentration (mg m^-3) [left]; cruise track overlaid onto VIIRS Naval Research Laboratory (NRL) composite image of sea surface temperature [right]. Both satellite images are time-binned 11-20 November 2014, the time period of the cruise.

Fig. 6. HyperSAS-POI on the mast at the bow of the ship.

Fig. 7. Collage showing the diversity of phytoplankton communities imaged by the FlowCam.

Fig. 8. Example of the pre- and post-cruise inter-calibration of the NOAA/STAR (Ls 206) and US (Ls 249) radiance sensors used in the Nov. 2014 Cal/Val cruise. The lamp radiances are the expected calibration source radiances. The pre- and post calibration measurements are the measured values of the lamps using each specific instruments original calibration.

Acknowledgements
This work was supported by the NOAA JPPS funding and ship time from NOAA OMAO. Participating groups outside of the NOAA Cal/Val team funded their own work. We are grateful to the officers and crew of the NOAA Ship Nancy Foster for making data collection possible.

Instruments Calibrations
Pre- and post-cruise inter-calibrations of radiometers were conducted at the NOAA Optical Characterization Experiment Laboratory in College Park, Maryland using National Institute of Standards and Technology (NIST) traceable FEL-1000 Watts lamp #R657 for irradiance, and an Optronic Laboratories OL-455 integrating sphere for radiance.

Participating Institutions
International:
• Joint Research Centre of the European Commission

Universities:
• U. Southern Mississippi
• U. Miami
• U. South Florida
• U. Massachusetts – Boston
• City College of NY
• LDEO at Columbia

US Agencies:
• NOAA/STAR
• NASA/GSFC
• National Institute of Standards and Technology (NIST)
• Naval Research Lab
